Résumé

La réalisation ITRF2014 (dernière en date) de l'International Terrestrial Reference System calculée par le Laboratoire de Recherche en Géodésie (LAREG) de l'IGN est le résultat de la combinaison des référentiels terrestres issus des quatre techniques de géodésie spatiale (c'est à dire DORIS, GNSS, SLR et VLBI). Pour réaliser un repère unique, un moyen consiste à ajouter dans la combinaison les résultats de rattachements sur des sites co-localisés. La station de poursuite de l'ESA sur l'île de l'Ascension (Royaume-Uni) dispose d'une station DORIS et d'une station GNSS permanente, intégrée dans le réseau de l'IGS. Le présent rapport décrit le rattachement de précision réalisé sur ce site en juillet 2015 suite à l'installation d'une station GNSS REGINA.

The ITRF2014 (latest) realization of the International Terrestrial Reference System computed by the Laboratoire de Recherche en Géodésie (LAREG) at IGN is the result of the combination of reference frame from four space geodesy techniques (i.e. DORIS, GNSS, SLR and VLBI). One way to realize one common frame consists in adding results in the combination from local ties at co-location sites. A DORIS station and a permanent GNSS station, included in IGS network, are installed at the ESA tracking station at Ascension Island (United Kingdom). This report describes the local tie survey carried out in July 2015, following the installation of the GNSS station.

1. Introduction

1.1. Context

The International Terrestrial Reference Frame (ITRF) is the result of a combination of different terrestrial reference frames provided by the four space geodetic techniques:

- Very Long Baseline Interferometry (VLBI)
- Satellite Laser Ranging (SLR)
- Global Navigation Satellite System (GNSS)
- Doppler Orbitography and Radiopositioning Integrated by Satellite (DORIS)

To perform this combination between independent reference frames, it is necessary to have some co-location sites where the various techniques are operating, from which tie vectors between their reference points have been surveyed in three dimensions.

According to GGOS objectives, a millimeter accuracy is required for the local ties.

In charge of the REGINA network deployment and the DORIS network maintenance, IGN carries out local tie surveys as far as a REGINA or DORIS station is co-located, with the following purposes:

- assign coordinates to new instruments reference points;
- provide tie vectors between instruments reference points (i.e. DORIS, GNSS, SLR, VLBI, tide gauge);

This document presents the local tie survey performed at Ascension Island (British Overseas Territories), which took place in July 2015 within the framework of the REGINA station installation.

1.2. Glossary

ARP : Antenna Reference Point

CNES : Centre National d'Études Spatiales (France)

DOMES : Directory of MERIT Sites

DORIS : Détermination d'Orbite et Radio positionnement Intégré par Satellite

ESA : European Space Agency

GGOS : Global Geodetic Observing System

GNSS : Global Navigation Satellite System

IDS : International DORIS Service

IERS : International Earth Rotation and Reference Systems Service

IGN : Institut National de l'Information Géographique et Forestière (France)

IGS : International GNSS Service

REGINA : REseau Gnss pour l'IGS et la NAVigation

SINEX : Solution INdependent Exchange

VLBI : Very Long Baseline Interferometry

Acknowledgements

On behalf of CNES and IGN, we would like to acknowledge Caroline Yon, manager of the ESA tracking station and her deputy, Nicholas John, for the welcome they have provided us, and the effective assistance to ensure the success of the mission. Thank you to them for their logistical support, efficiency, availability and good mood.

Thomas Donal (IGN), Nicholas John (ESA), Caroline Yon (ESA), Jean-Paul Cardaliaguet (CNES).

2. Co-location site description

2.1. Site description

The Ascension Island, British Overseas Territories, is located in the middle of Atlantic Ocean, close to the Earth's equator.

The site is located in the north-east part if the island, at the spacecraft tracking station managed by ESA. The tracking station is the subject of an agreement between ESA and the British government for the Ariane, Vega and Soyuz tracking activities.

▪Address of the site

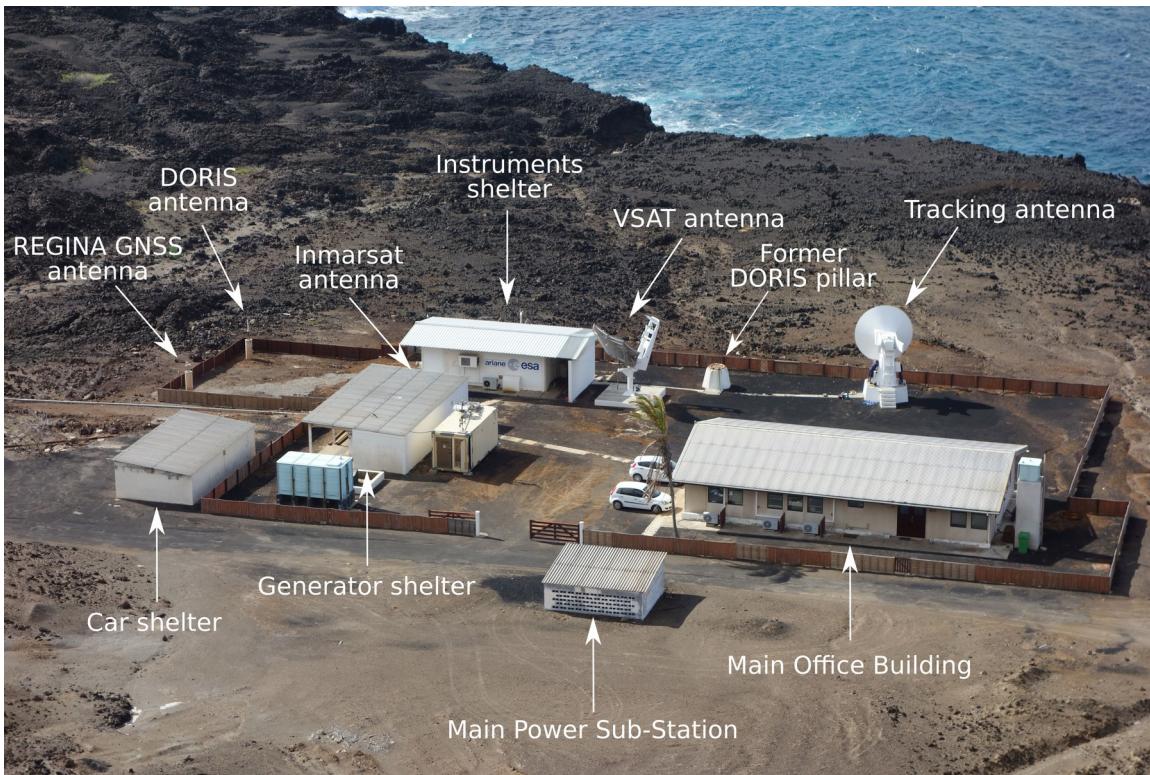

ESA Telemetry Tracking Station
Ascension Island
British Overseas Territory

▪Closer view

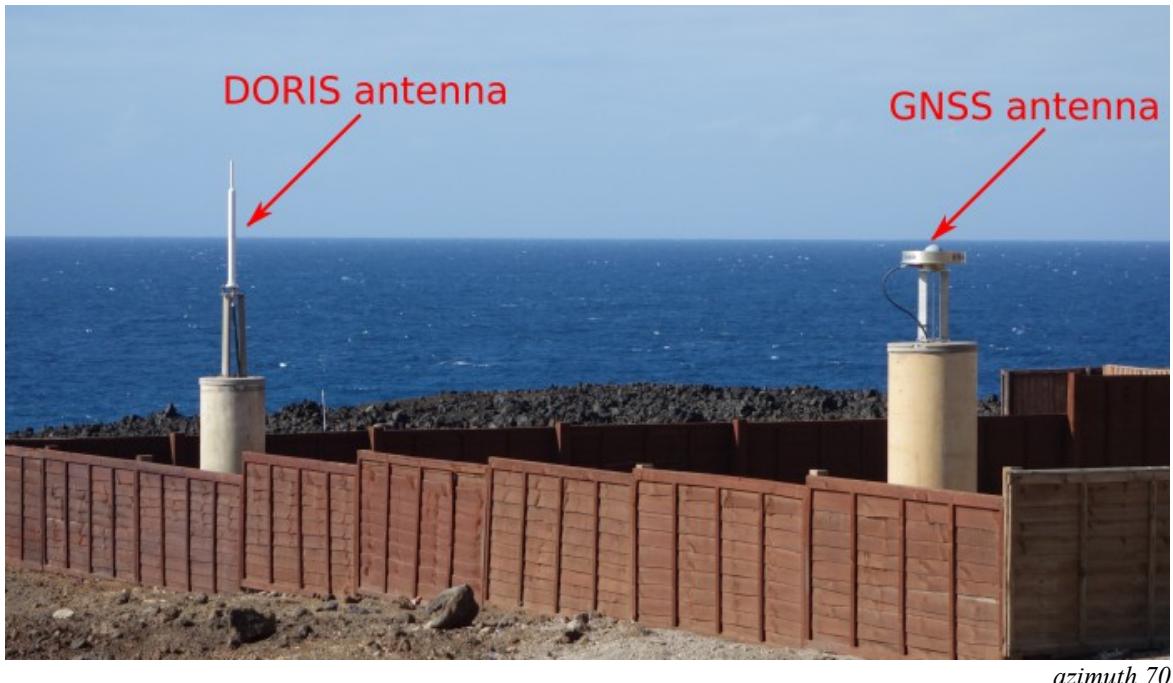

The tracking station and its environment

The tracking station and its equipments

The ESA Tracking Station hosts a DORIS and GNSS stations.

The topometric local tie survey was performed between REGINA GNSS antenna, DORIS antenna and former DORIS pillar.

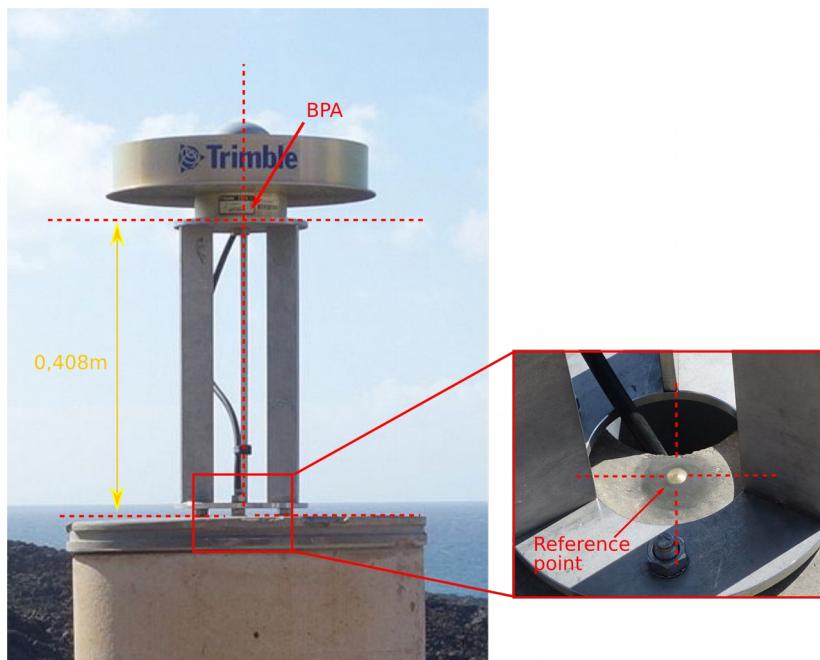

In addition, GNSS observations have been carried out to tie the tide gauge located at English Bay.

2.2. Co-located points

2.2.1. GNSS station – ASCG

A permanent GNSS station named ASCG has been installed during the campaign. This station is dedicated to the GNSS real time Network for IGS and Navigation (REGINA) project. The antenna is a Trimble TRM 59800.00 type without radome. This antenna is mounted on top of a 40cm high stainless steel rigid structure. The reference point is defined as the top and centre of a brass mark embedded on top of the concrete pillar, vertically down from the antenna BPA (Bottom of the Pre-Amp).

Acronym : ASCG	DOMES number : 30602M004
 General view	 Close-up view (reference point)
Description : antenna monument and reference point. Antenna height is 0,408 m . See sitelog in appendix 6.2.	

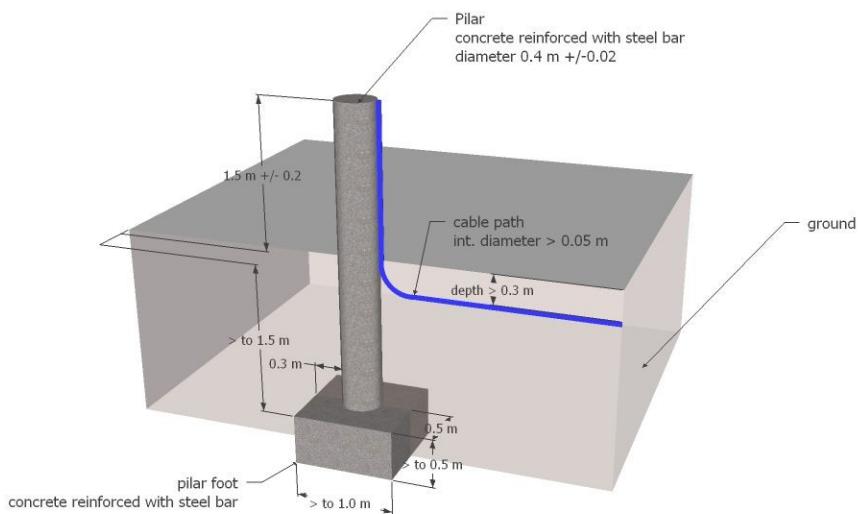

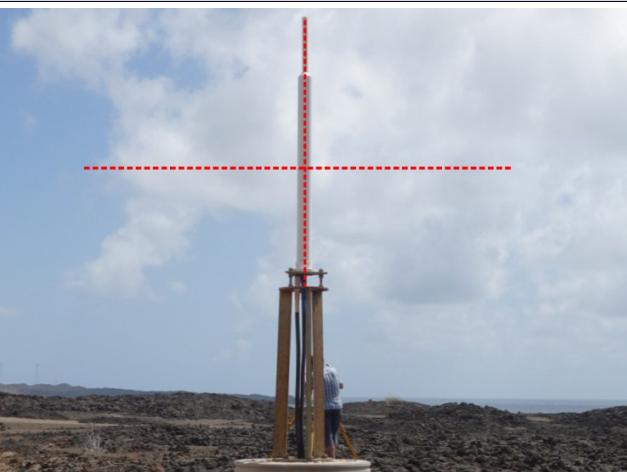

Diagram of the concrete reinforced pillar, GNSS monument.

2.2.2. DORIS station -ASEB

After a renovation on June 2010, the current antenna with the acronym « ASEB » is installed on top of a 40cm high stainless steel rigid structure. A domed brass marker is embedded into the concrete pillar vertically down the antenna. The antenna reference point is defined as the point located 0,390m above the antenna mounting surface. This point is roughly indicated with a red painting ring in the middle of the lower tube.

Acronym : ASEB	DOMES number : 30602S005
	
General view	Close-up view (reference point)
Description : DORIS antenna and reference point. See sitelog in appendix 6.1.	

Name: current DORIS marker	DOMES number : 30602M003
	
General view	Close-up view
Description : domed brass marker embedded on top of the concrete pillar in the vertical alignment with the DORIS antenna.	

For further details, refer to the IDS website : www.ids-doris.org.

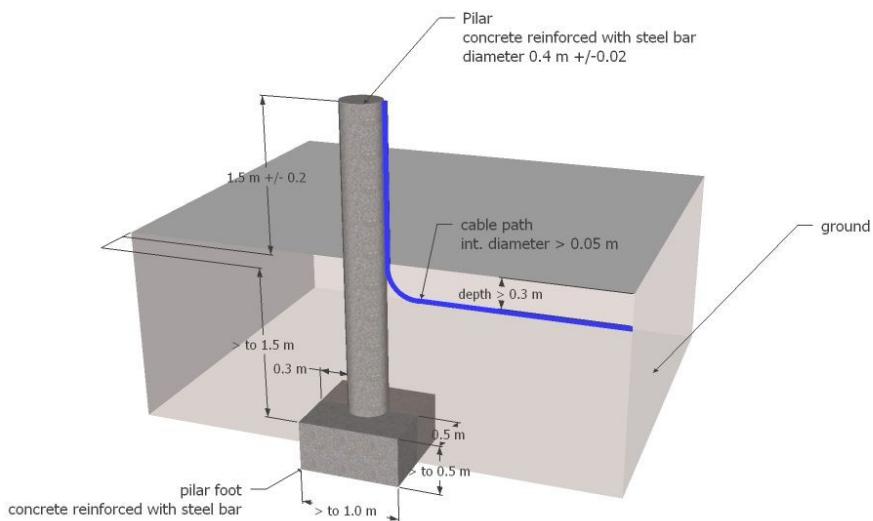

Diagram of the concrete reinforced pillar, DORIS monument.

2.2.3. Former DORIS station – ASDB

The DORIS station was initially set up in February 1997 on a concrete pillar, former STELLA antenna support. A domed brass marker is embedded into the concrete pillar

Name: DORIS marker	DOMES number : 30602M002
	
General view	Close-up view
Description : domed brass marker embedded on top of the former STELLA concrete block.	

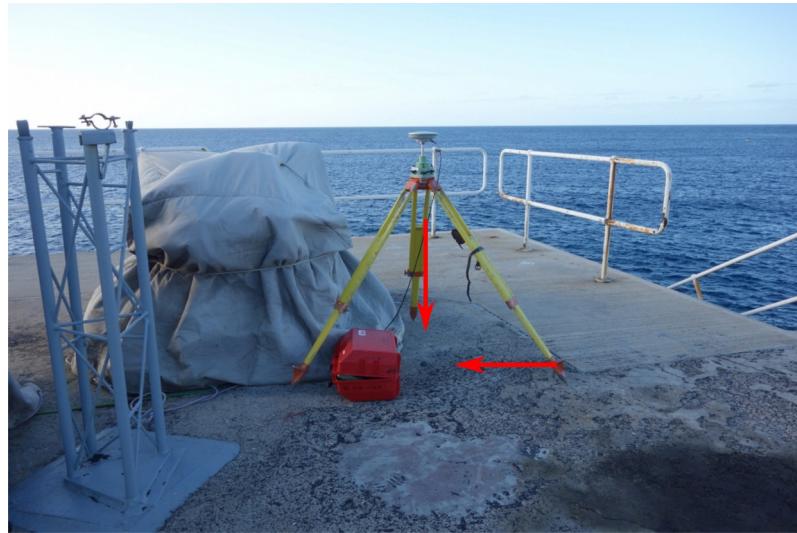

2.2.4. Tide gauge

6,5 km away from the tracking station, at English Bay in the North part of the island, is installed a permanent tide gauge, part of the ACCLAIM program (Antarctic Circumpolar Current Levels by Altimetry and Island Measurements), and contributing to the GLOSS network (Global Sea Level Observing System).

Tide gauge at English Bay, GLOSS ID:263

A benchmark from the Proudman Oceanographic Laboratory (POL18) close to the tide gauge has been tied to the GNSS station ASCG by GNSS baseline process.

Benchmark POL18

An unknown permanent GNSS station seems to be co-located with the tide gauge.

For more details, refer to SONEL, PSMSL and GLOSS websites :

3. Site survey description

3.1. Organization

The site survey took place during the REGINA station installation from July 20th to July 28th, 2015 and was conducted by Thomas Donal (IGN) with the help of Jean-Paul Cardaliaguet (CNES).

The topometric surveying operations was carried out on July 23th, 2015.

3.2. Equipment

All the surveying instruments used for this project belong to IGN, except GNSS REGINA instrumentations which belong to CNES.

3.2.1. GNSS REGINA permanent station

Type	Model	Quantity
GNSS antenna	Trimble Choke Ring TRM 59800.00	1
GNSS receiver	Trimble NetR9	1

3.2.2. Surveying instruments

The Leica total station used for the site survey, is yearly calibrated at IGN's calibration unit. It has a standard deviation of 0.15 mgon for angles and 1mm + 1 ppm for distances.

Type	Model	Quantity
GNSS receiver	Leica GX1230GG	2
GNSS antenna	Leica AX1202GG	2
Total station	Leica TCA2003	1

3.2.3. Surveying accessories

Two Leica accurate reflectors calibrated with the total station were used to determine distances.

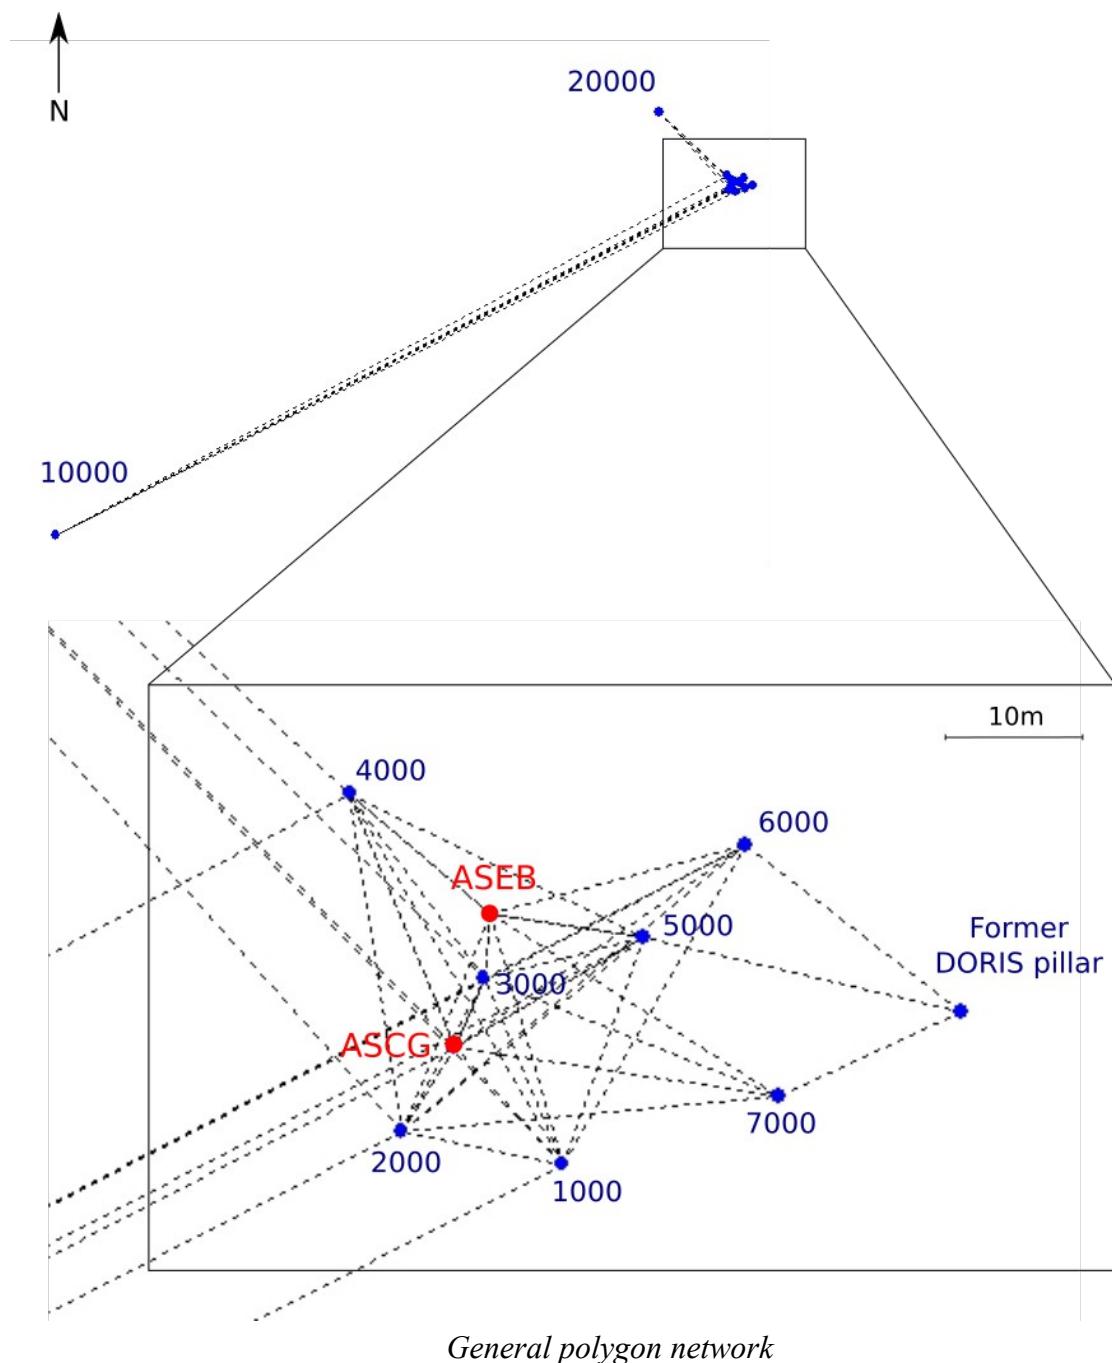

Type	Model	Quantity
Reflector	Leica GPH1P	2
Mini reflector	Leica GMP101	1
Carrier with optical plummet	Leica GZR3	1
Carrier with laser plummet	Leica SNLL121	1
Tripod	Leica wooden tripod	5
Meteo station	Kestrel 4500	1
Reflector pole	Leica GLS14	1

Surveying operations

3.3. Polygon network

All surveying operations have been carried out in such a way to provide the highest accuracy for the 3D vectors determination between the observing reference points.

Observations were done by total station from seven temporary stations : 1000, 2000, 3000, 4000, 5000, 6000 and 7000.

3.4. Surveying method

All the lines of sight have been observed with the total station. Horizontal directions and zenith angles were observed in data sets, each set consisting in one reading in both direct and reverse theodolite positions. Distance measurements were observed at least twice over each line. Meteorological data (atmospheric pressure and temperature) used to correct distances measurements, were recorded during the operation.

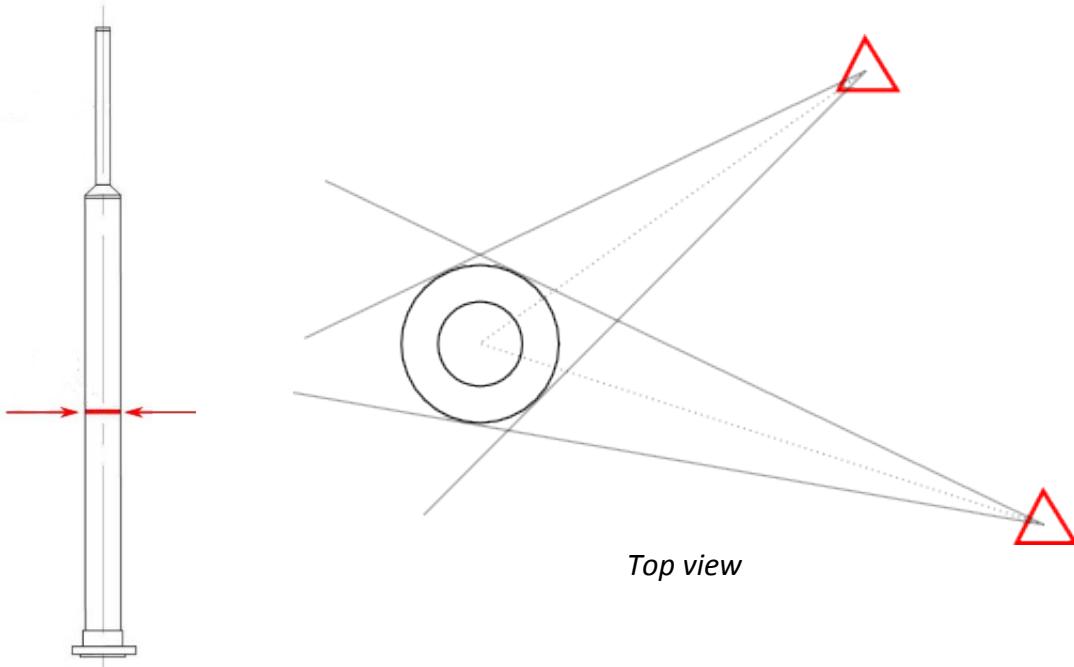

The set up strategy mixed GNSS and conventional observations. The GNSS observations were used to get the polygon bearing.

3.4.1. Permanent stations reference point

ASEB reference point :

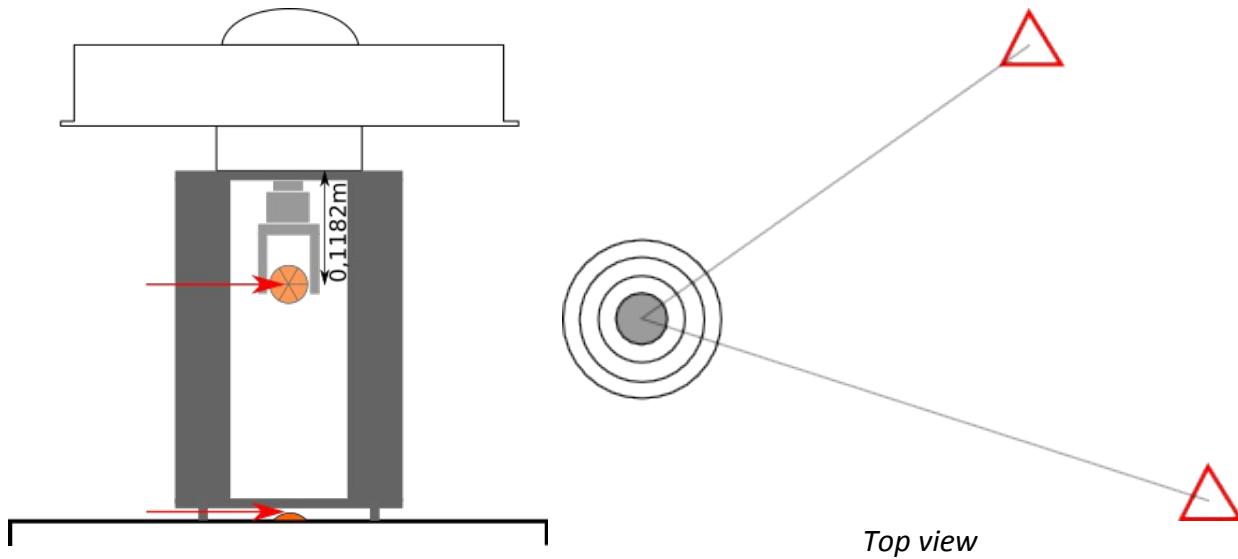

The reference point of DORIS antenna has been determined indirectly.

From each surveying station aiming at the antenna, right and left tangents to the DORIS antenna close to the ARP (red circle) were observed. In the adjustment, horizontal and zenithal angle observations were simply averaged to get its planimetric and altimetric positions.

ASCG reference point :

From each surveying station aiming at the antenna, the reference point was directly observed through a prism set up in the vertical alignment of the ARP. Vertical offset from prism to ARP is accurately known (see below).

3.4.2. GNSS observations

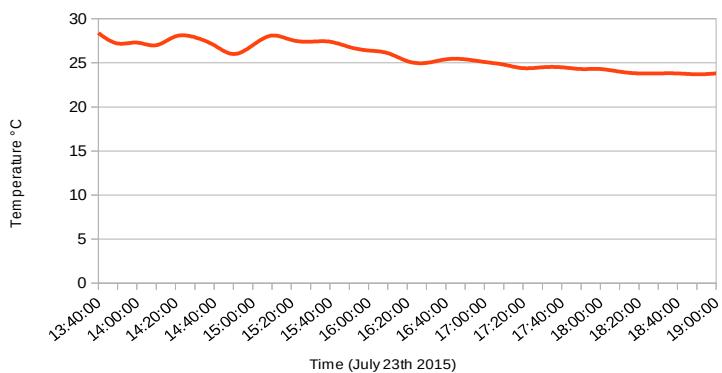

GNSS observations have been carried out in order to determine the orientation of the survey network. Orientations are known from the baselines between ASCG and stations 10000 and 20000. These two stations were temporary setup as far away as possible from the site (1300m for station 10000).

In addition, GNSS observations have been carried out to tie the permanent GNSS station ASCG to benchmark POL18 close to the tide gauge.

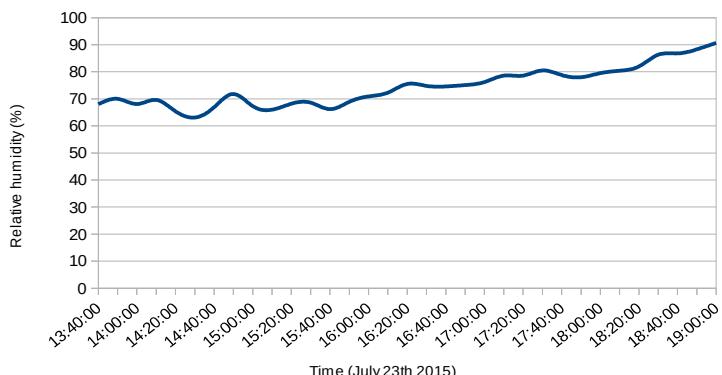

3.5. Weather data

Ascension Island has an oceanic climate. The site is very close from the seaboard and exposed to sea spray.

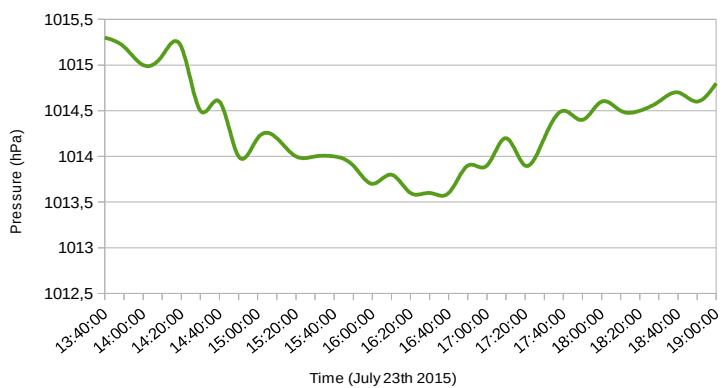

Next graphics show weather conditions on site during the topometric survey measurements, i.e. July 23th 2015, from 2 pm to 7 pm.

Data record by weather tracker Kesterl 4500.

Data record by weather tracker Kesterl 4500.

Data record by weather tracker Kesterl 4500.

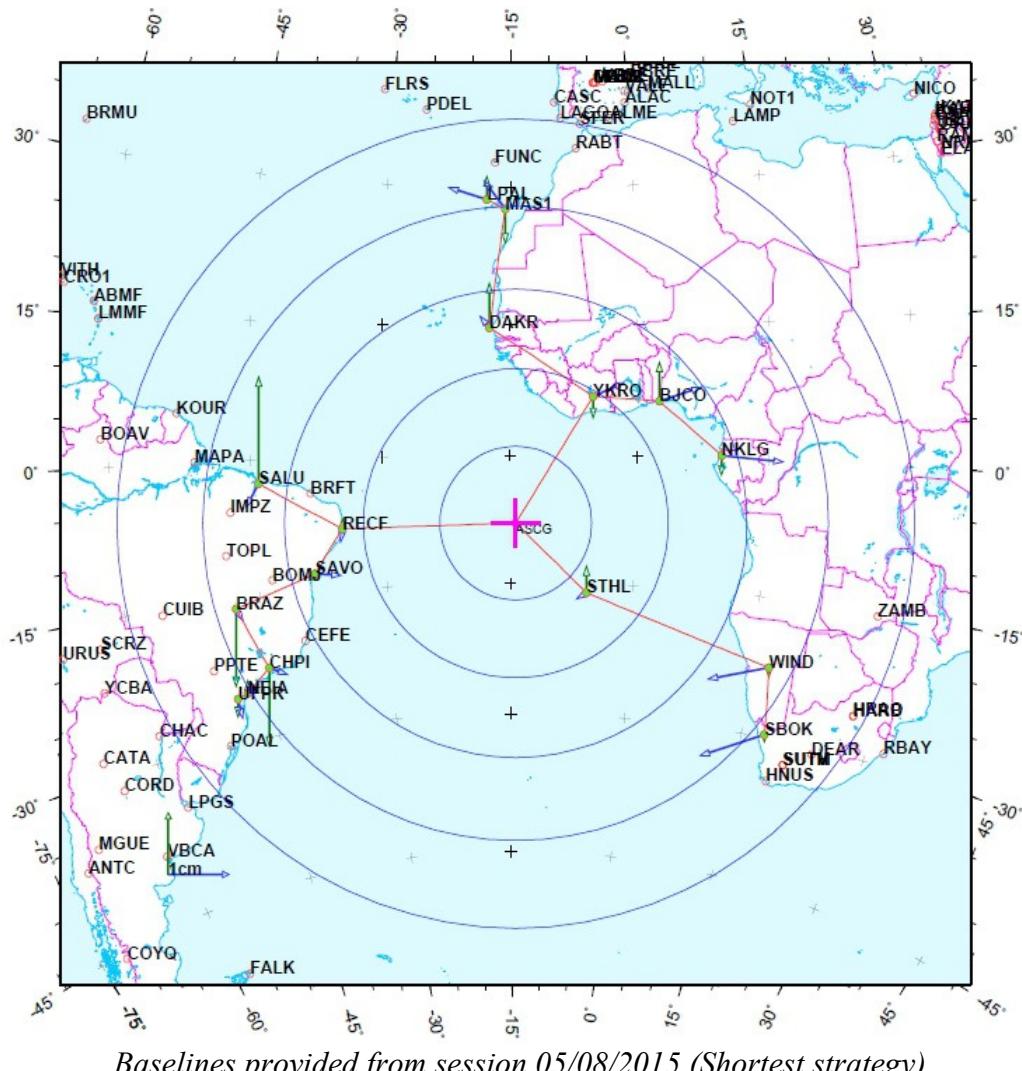

July 23th 2015, the weather was sunny and quiet. These data have been taken into account to correct the distance measurements.

4. Computation

4.1. Determination of ASCG antenna reference point coordinates in IGb08

The resulting coordinates are expressed in IGb08 at the mid-epoch of a GNSS data set, i.e. epoch 2015:217 (05/08/2015) close to the local tie survey operation date. 7 daily data sessions including 16 surrounding IGS station have been processed, from 2 August 2015 to 8 August 2015.

In summary, the computation process was the following: a first step to provide loosely constrained solutions, and a second step to combine these solutions in order to get final coordinates in the properly defined reference frame.

The use of a high level software *Bernese GNSS Software V5* is required with a thoroughly fixed parameterization.

The processing of a GNSS data set in ITRF is achieved by the use of IGS data and products expressed in IGb08 reference frame.

The computation process is described in appendix 6.3.

■ **Coordinates expressed in IGb8 at epoch 2015:217**

Cartesian coordinates, IGb08/ITRF08, epoch 2015:217 (05/08/2015)

4.2. Local GNSS network

The local GNSS baselines (see paragraph 3.4.2) were processed with Leica Geo Office V8.3 software using IGb08 precise ephemeris and the original set of « absolute » GNSS antenna calibrations (igs08.atx).

The corresponding LGO report file is given in appendix 6.4.

4.3. Global adjustment

The final computation has been carried out by an iterative least squares 3D adjustment with the Microsearch Geolab version 2001.9.20.0 software. The input file (see appendix 6.5) has been built from :

- Total station observations : horizontal and zenith angles, distances,
- Centring equations : relative position to markers,
- Azimuths issued from the GNSS baselines process,
- ASCG antenna reference point coordinates constrained at 1 mm to its IGb08 (epoch 2015:217, 05/08/2015) values.

The a priori standard deviations used for the different observations with total station are :

- 0.8 mgon for horizontal and vertical angles,
- 1 mm for distances on prism,

These values are used for most of the targets in the Microsearch Geolab computation input file.

This adjustment provided coordinates and a covariance matrix of our survey work (appendix 6.6).

Geoid slope is negligible around Ascension Island. The undulation of the geoid model EGM08 has not been taken into account in the process to correct the vertical normal heights.

5. Results

5.1. Station name translation table

The following list sums up the main points of the Microsearch Geolab input file.

Point description	Used name or code	Computation name
DORIS stations → DORIS antenna reference point	30602S005	ASEB
→ DORIS pillar/domed mark	30602M003	ASEB_marker
→ Ex-DORIS mark	30602M002	ASDB_marker
GNSS permanent station → ASCG reference point	30602M004	ASCG
→ ASCG antenna reference point	-	ASCG_ARP
Benchmark → Tide Gauge benchmark POL18	-	POL18

In addition, observations from a local tie survey conducted by IGN in March 2003 have been added in the input file to recover the link between the ex-DORIS mark and the former DORIS antenna reference point, ASDB.

5.2. Adjusted coordinates and confidence regions

The results of the adjustment are the coordinates of all points and their confidence ellipsoids in the IGB08 reference frame at the mean epoch of the observations (i.e. epoch 2015 :217).

The table below provides the 3D coordinates and confidence region at 95 % of the points of interest.

=====
```

The whole covariance matrix was computed, then it was possible to extract from it the covariance submatrix for the 2 main points of interest i.e. ASCG and ASEB, plus ASDB, for the next ITRF computation. Finally, this covariance submatrix has been converted into the SINEX format using the « geotosnx » tool provided by Z. Altamimi. The resulting SINEX file (30602 IGN 2015-217_V10.SNX) is provided in appendix 6.7.

5.3. Vectors between points of interest

Differential components between points of interest in IGb08:

	dX (m)	dY (m)	dZ (m)	Accuracy (m)
ASCG → ASEB	2,484	2,130	9,448	0,001
ASCG → ASCG_ARP	0,392	-0,100	-0,055	0,001
ASEB → ASEB_marker	-1,046	0,267	0,150	0,001
ASEB → ASDB_marker	6,945	33,633	-6,898	0,001
ASCG → ASDB_marker	9,429	35,763	2,550	0,001
ASCG → POL18	-1122,246	-5758,161	2565,025	0,002

6. Appendixes

6.1. «ASEB» DORIS station site log

ASCENSION DORIS site description form

0. Form

Prepared by : SIMB (DORIS installation and maintenance department)
Date prepared : 29/01/2013
Report type : NEW

1. Site location information

Site name : ASCENSION
Site DOMES number : 30602
Host agency : ARIANE Tracking Station
City : Ascension Island
State or province : South Atlantic Ocean
Country : UNITED KINGDOM (South Atlantic Ocean)
Tectonic plate : SOAM
Geological information :

Geographical coordinates (ITRF) :
North Latitude : -7 deg 54' 58''
East Longitude : -14 deg 19' 58''
Ellipsoid height : 38 m
Approximate altitude : 24 m

2. DORIS antenna and reference point information

2.1

Four character ID : ASDB
Antenna model : Starec 52291 type
Antenna serial number : 58
IERS DOMES number : 30602S004
CNES/IGN number : 306022
DORIS SSALTO number : 74
Date installed (dd/mm/yy) : 28/02/1997
Date removed (dd/mm/yy) : 16/03/2003
Antenna support type : Concrete pillar (old STELLA antenna support)
Installed on : Concrete pad
Height above ground mark : 0.548 m
Ground mark type : Domed brass mark 12 mm diameter
Ground mark DOMES number : 30602M002
Notes :

2.2

Four character ID : ASDB
Antenna model : Starec 52291 type
Antenna serial number : 89
IERS DOMES number : 30602S004
CNES/IGN number : 306022
DORIS SSALTO number : 74
Date installed (dd/mm/yy) : 16/03/2003
Date removed (dd/mm/yy) : 25/06/2009
Antenna support type : Concrete pillar (old STELLA antenna support)
Installed on : Concrete pad
Height above ground mark : 0.548 m
Ground mark type : Domed brass mark 12 mm diameter
Ground mark DOMES number : 30602M002
Notes :

2.3

Four character ID : ASEB
Antenna model : Starec 52291 type
Antenna serial number : 135
IERS DOMES number : 30602S005
CNES/IGN number : 306023
DORIS SSALTO number : 290
Date installed (dd/mm/yy) : 14/06/2010
Date removed (dd/mm/yy) :
Antenna support type : Stainless steel interface
Installed on : 1.5m high concrete reinforced pillar
Height above ground mark : 1.090 m
Ground mark type : Domed brass mark
Ground mark DOMES number : 30602M003
Notes :

3. DORIS beacons information

3.1

Beacon serial number : 9845107
Beacon model : 2.0
USO serial number : 2.866
4 Char. ID of the REF point : ASDB
Date installed (dd/mm/yy) : 09/04/1999
Date removed (dd/mm/yy) : 12/02/2002

3.2

Beacon serial number : 9904130
Beacon model : 2.0
USO serial number : 3.152
4 Char. ID of the REF point : ASDB
Date installed (dd/mm/yy) : 09/04/2002
Date removed (dd/mm/yy) : 18/05/2004

3.3

Beacon serial number : 9904121
Beacon model : 2.0
USO serial number : 3.130
4 Char. ID of the REF point : ASDB
Date installed (dd/mm/yy) : 19/05/2004
Date removed (dd/mm/yy) : 30/03/2005

3.4

Beacon serial number : 2819052
Beacon model : 3.0
USO serial number : 3.405
4 Char. ID of the REF point : ASDB
Date installed (dd/mm/yy) : 01/04/2005
Date removed (dd/mm/yy) : 07/04/2010

3.5

Beacon serial number : 2819017
Beacon model : 3.0
USO serial number : 3.280
4 Char. ID of the REF point : ASEB
Date installed (dd/mm/yy) : 14/06/2010
Date removed (dd/mm/yy) :

4. ITRF coordinates and velocities of the current DORIS ref. point (ASEB)

Solution : DPOD2008
Epoch : 2005.0

X = 6121154.081 m Y = -1563976.723 m Z = -872606.019 m
Sig X = 0.002 m Sig Y = 0.003 m Sig Z = 0.002 m

VX = -0.0032 m/y VY = -0.0090 m/y VZ = 0.0111 m/y
Sig VX = 0.0006 m/y Sig VY = 0.0007 m/y Sig VZ = 0.0004 m/y

5. IERS colocation information

6. Tide Gauge colocation information

6.1

Name : Ascension Is.
Location : Hook Jetty, English Bay
GLOSS number : 263
Distance : 6.4 km
Notes :

7. Local site ties

7.1

Point description : DORIS Starec antenna reference point ((ASDB)
DOMES number : 30602S004
Differential components from the current DORIS ref. point (ASEB)
to the above point (in the ITRS) :
dX (m) : 7.470
dY (m) : 33.499
dZ (m) : -6.973
Accuracy (m) : 0.001
Date measured : 14/06/2010
Additional information : Survey by IGN-F 2010

7.2

Point description : Mark under Doris antenna (ASDB)
DOMES number : 30602M002
Differential components from the current DORIS ref. point (ASEB)
to the above point (in the ITRS) :
dX (m) : 6.944
dY (m) : 33.633
dZ (m) : -6.870
Accuracy (m) : 0.001
Date measured : 14/06/2010
Additional information : Survey by IGN-F 2010

7.3

Point description : Mark under Doris antenna (ASEB)
DOMES number : 30602M003
Differential components from the current DORIS ref. point (ASEB)
to the above point (in the ITRS) :
dX (m) : -1.046
dY (m) : 0.267
dZ (m) : 0.150
Accuracy (m) : 0.001
Date measured : 14/06/2010
Additional information : Survey by IGN-F 2010

7.4

Point description : Tide gauge English Bay: POL18 mark

Differential components from the current DORIS ref. point (ASEB)
to the above point (in the ITRS) :
dX (m) : -1124.734
dY (m) : -5760.272
dZ (m) : 2555.544
Accuracy (m) : 0.002
Date measured : 15/06/2010
Additional information : Survey by IGN-F 2003 & 2010

8. Meteorological Instrumentation

8.1 Humidity sensor

Model : HMP45D
Manufacturer : VAISALA
Accuracy : +/- 3 percents
Notes :

8.2 Pressure sensor

Model : PTU200 class B
Manufacturer : VAISALA
Accuracy : +/- 0.25 hPa
Height : 1.9 m above the current DORIS ref. point (ASEB)
Notes : long term stability = +/- 0.1 hPa/year

8.3 Temperature sensor
Model : HMP45D
Manufacturer : VAISALA
Accuracy : +/- 0.5 deg C
Notes :

9. DORIS network contacts

6.2. «ASCG» GNSS station site log

ASCG Site Information Form (site log)
International GNSS Service
See Instructions at:
ftp://igscb.jpl.nasa.gov/pub/station/general/sitelog_instr.txt

0. Form

Prepared by (full name) : Thomas DONAL
Date Prepared : 2015-10-16
Report Type : update
If Update:
Previous Site Log : ascg_20150916.log
Modified/Added Sections : 3.1,3.2

1. Site Identification of the GNSS Monument

Site Name : Ascension
Four Character ID : ASCG
Monument Inscription : None
IERS DOMES Number : 30602M004
CDP Number :
Monument Description : concrete pillar and 40 cm steel antenna mount
Height of the Monument : 2 m
Monument Foundation : concrete block
Foundation Depth : 1.4 m
Marker Description : brass hemispheric mark
Date Installed : 2015-07-24T00:00Z
Geologic Characteristic :
Bedrock Type :
Bedrock Condition :
Fracture Spacing :
Fault zones nearby :
Distance/activity :
Additional Information : GNSS station located at ARIANE Tracking Station
: site managed by European Space Agency

2. Site Location Information

City or Town : Ascension Island
State or Province : British Overseas Territory
Country : Saint Helena, Ascension and Tristan Da Cunha
Tectonic Plate : SOUTH AMERICAN
Approximate Position (ITRF)
X coordinate (m) : 6121151.5493
Y coordinate (m) : -1563978.9235
Z coordinate (m) : -872615.3556
Latitude (N is +) : -075458.61168
Longitude (E is +) : -0141957.59211
Elevation (m,ellips.) : 37.953
Additional Information : coordinates in IGS08
: EPOCH 2015:217 (05/08/2015)

3. GNSS Receiver Information

3.1 Receiver Type : TRIMBLE NETR9
Satellite System : GPS+GLO+GAL+BDS+SBAS
Serial Number : 5340K46069
Firmware Version : 5.01
Elevation Cutoff Setting : 3 deg
Date Installed : 2015-07-24T00:00Z
Date Removed : 2015-10-16T15:05Z
Temperature Stabiliz. : 25 C +/- 5 C
Additional Information :

3.2 Receiver Type : TRIMBLE NETR9
Satellite System : GPS+GLO+GAL+BDS+SBAS

Serial Number	:	5340K46069
Firmware Version	:	5.01
Elevation Cutoff Setting	:	0 deg
Date Installed	:	2015-10-16T15:10Z
Date Removed	:	CCYY-MM-DDThh:mmZ
Temperature Stabiliz.	:	25 C +/- 5 C
Additional Information	:	
3.x Receiver Type	:	(A20, from rcvr_ant.tab; see instructions)
Satellite System	:	(GPS+GLO+GAL+BDS+QZSS+SBAS)
Serial Number	:	(A20, but note the first A5 is used in SINEX)
Firmware Version	:	(A11)
Elevation Cutoff Setting	:	(deg)
Date Installed	:	(CCYY-MM-DDThh:mmZ)
Date Removed	:	(CCYY-MM-DDThh:mmZ)
Temperature Stabiliz.	:	(none or tolerance in degrees C)
Additional Information	:	(multiple lines)

4. GNSS Antenna Information

4.1 Antenna Type	:	TRM59800.00	NONE
Serial Number	:	5406354931	
Antenna Reference Point	:	BPA	
Marker->ARP Up Ecc. (m)	:	000.4080	
Marker->ARP North Ecc(m)	:	-000.0007	
Marker->ARP East Ecc(m)	:	000.0001	
Alignment from True N	:	0 deg	
Antenna Radome Type	:	NONE	
Radome Serial Number	:		
Antenna Cable Type	:	TRIMBLE LMR-400	
Antenna Cable Length	:	30 m	
Date Installed	:	2015-07-24T00:00Z	
Date Removed	:	CCYY-MM-DDThh:mmZ	
Additional Information	:	(multiple lines)	

4.x Antenna Type	:	(A20, from rcvr_ant.tab; see instructions)
Serial Number	:	(A*, but note the first A5 is used in SINEX)
Antenna Reference Point	:	(BPA/BCR/XXX from "antenna.gra"; see instr.)
Marker->ARP Up Ecc. (m)	:	(F8.4)
Marker->ARP North Ecc(m)	:	(F8.4)
Marker->ARP East Ecc(m)	:	(F8.4)
Alignment from True N	:	(deg; + is clockwise/east)
Antenna Radome Type	:	(A4 from rcvr_ant.tab; see instructions)
Radome Serial Number	:	
Antenna Cable Type	:	(vendor & type number)
Antenna Cable Length	:	(m)
Date Installed	:	(CCYY-MM-DDThh:mmZ)
Date Removed	:	(CCYY-MM-DDThh:mmZ)
Additional Information	:	(multiple lines)

5. Surveyed Local Ties

5.1 Tied Marker Name	:	DORIS antenna ref. pt.(ASEB)
Tied Marker Usage	:	
Tied Marker CDP Number	:	
Tied Marker DOMES Number	:	30602S005
Differential Components from GNSS Marker to the tied monument (ITRS)		
dx (m)	:	2.4840
dy (m)	:	2.1301
dz (m)	:	9.4481
Accuracy (mm)	:	1 mm
Survey method	:	TRIANGULATION
Date Measured	:	2015-07-23T00:00Z
Additional Information	:	high geodetic surveying proceed by IGN-F

5.2 Tied Marker Name	:	Mark under DORIS antenna(ASEB)
Tied Marker Usage	:	
Tied Marker CDP Number	:	
Tied Marker DOMES Number	:	30602M003
Differential Components from GNSS Marker to the tied monument (ITRS)		
dx (m)	:	1.4377
dy (m)	:	2.3976
dz (m)	:	9.5981

Accuracy (mm) : 1 mm
Survey method : TRIANGULATION
Date Measured : 2015-07-23T00:00Z
Additional Information : high geodetic surveying proceed by IGN-F

5.3 Tied Marker Name : Mark under former Doris antenna (ASDB)
Tied Marker Usage :
Tied Marker CDP Number :
Tied Marker DOMES Number : 30602M002
Differential Components from GNSS Marker to the tied monument (ITRS)
dx (m) : 9.42881
dy (m) : 35.7635
dz (m) : 2.5502
Accuracy (mm) : 1 mm
Survey method : TRIANGULATION
Date Measured : 2015-07-23T00:00Z
Additional Information : high geodetic surveying proceed by IGN-F

5.4 Tied Marker Name : Tide gauge English Bay: POL18 mark
Tied Marker Usage :
Tied Marker CDP Number :
Tied Marker DOMES Number :
Differential Components from GNSS Marker to the tied monument (ITRS)
dx (m) : -1122.246
dy (m) : -5758.161
dz (m) : 2565.025
Accuracy (mm) : 3 mm
Survey method : TRIANGULATION
Date Measured : 2015-07-23T00:00Z
Additional Information : surveying proceed by IGN-F

5.x Tied Marker Name :
Tied Marker Usage : (SLR/VLBI/LOCAL CONTROL/FOOTPRINT/etc)
Tied Marker CDP Number : (A4)
Tied Marker DOMES Number : (A9)
Differential Components from GNSS Marker to the tied monument (ITRS)
dx (m) : (m)
dy (m) : (m)
dz (m) : (m)
Accuracy (mm) : (mm)
Survey method : (GPS CAMPAIGN/TRILATERATION/TRIANGULATION/etc)
Date Measured : (CCYY-MM-DDThh:mmZ)
Additional Information : (multiple lines)

6. Frequency Standard

6.1 Standard Type : INTERNAL
Input Frequency :
Effective Dates : 2015-07-24/CCYY-MM-DD
Notes :

6.x Standard Type : (INTERNAL or EXTERNAL H-MASER/CESIUM/etc)
Input Frequency : (if external)
Effective Dates : (CCYY-MM-DD/CCYY-MM-DD)
Notes : (multiple lines)

7. Collocation Information

7.1 Instrumentation Type : DORIS
Status : PERMANENT
Effective Dates : 1997-02-28/CCYY-MM-DD
Notes :

7.2 Instrumentation Type : TIDE GAUGE
Status : PERMANENT
Effective Dates : 1993-01-01/CCYY-MM-DD
Notes : GLOSS ID: 263
located at English Bay,
6 km far away from ASCG
Agency: National Oceanography Centre

7.x Instrumentation Type : (GPS/GLONASS/DORIS/PRARE/SLR/VLBI/TIME/etc)
Status : (PERMANENT/MOBILE)

Effective Dates : (CCYY-MM-DD/CCYY-MM-DD)
Notes : (multiple lines)

8. Meteorological Instrumentation

8.1.x Humidity Sensor Model :
Manufacturer :
Serial Number :
Data Sampling Interval : (sec)
Accuracy (% rel h) : (% rel h)
Aspiration : (UNASPIRATED/NATURAL/FAN/etc)
Height Diff to Ant : (m)
Calibration date : (CCYY-MM-DD)
Effective Dates : (CCYY-MM-DD/CCYY-MM-DD)
Notes : (multiple lines)

8.2.x Pressure Sensor Model :
Manufacturer :
Serial Number :
Data Sampling Interval : (sec)
Accuracy : (hPa)
Height Diff to Ant : (m)
Calibration date : (CCYY-MM-DD)
Effective Dates : (CCYY-MM-DD/CCYY-MM-DD)
Notes : (multiple lines)

8.3.x Temp. Sensor Model :
Manufacturer :
Serial Number :
Data Sampling Interval : (sec)
Accuracy : (deg C)
Aspiration : (UNASPIRATED/NATURAL/FAN/etc)
Height Diff to Ant : (m)
Calibration date : (CCYY-MM-DD)
Effective Dates : (CCYY-MM-DD/CCYY-MM-DD)
Notes : (multiple lines)

8.4.x Water Vapor Radiometer :
Manufacturer :
Serial Number :
Distance to Antenna : (m)
Height Diff to Ant : (m)
Calibration date : (CCYY-MM-DD)
Effective Dates : (CCYY-MM-DD/CCYY-MM-DD)
Notes : (multiple lines)

8.5.x Other Instrumentation : (multiple lines)

9. Local Ongoing Conditions Possibly Affecting Computed Position

9.1.x Radio Interferences : (TV/CELL PHONE ANTENNA/RADAR/etc)
Observed Degradations : (SN RATIO/DATA GAPS/etc)
Effective Dates : (CCYY-MM-DD/CCYY-MM-DD)
Additional Information : (multiple lines)

9.2.x Multipath Sources : (METAL ROOF/DOME/VLBI ANTENNA/etc)
Effective Dates : (CCYY-MM-DD/CCYY-MM-DD)
Additional Information : (multiple lines)

9.3.x Signal Obstructions : (TREES/BUILDINGS/etc)
Effective Dates : (CCYY-MM-DD/CCYY-MM-DD)
Additional Information : (multiple lines)

10. Local Episodic Effects Possibly Affecting Data Quality

10.x Date : (CCYY-MM-DD/CCYY-MM-DD)
Event : (TREE CLEARING/CONSTRUCTION/etc)

11. On-Site, Point of Contact Agency Information

Agency : European Space Agency
Preferred Abbreviation : ESA

Mailing Address	:	ESA Telemetry Tracking Station

Additional Information : : (multiple lines)
Antenna Graphics with Dimensions

TRM59800.00

Abbreviations

ARP: antenna reference point
BCR: bottom of choker

BPA: bottom of preamplifier
TCR: top of chokering

Dimensions

All dimensions are in meters.

6.3. Bernese GNSS process

The processing of a GNSS data set in ITRF is achieved by the use of IGS data and products expressed in IGb08 reference frame:

- Ephemeris and Earth Orientation Parameters.
- GNSS observations, coordinates and velocities of IGS reference stations. Basically the observation data of about 16 IGS stations in a 5000 km radius from Ascension Island are available daily.
- Antenna calibration stemming from igs08.atx.

The computation is validated with respect to the following points:

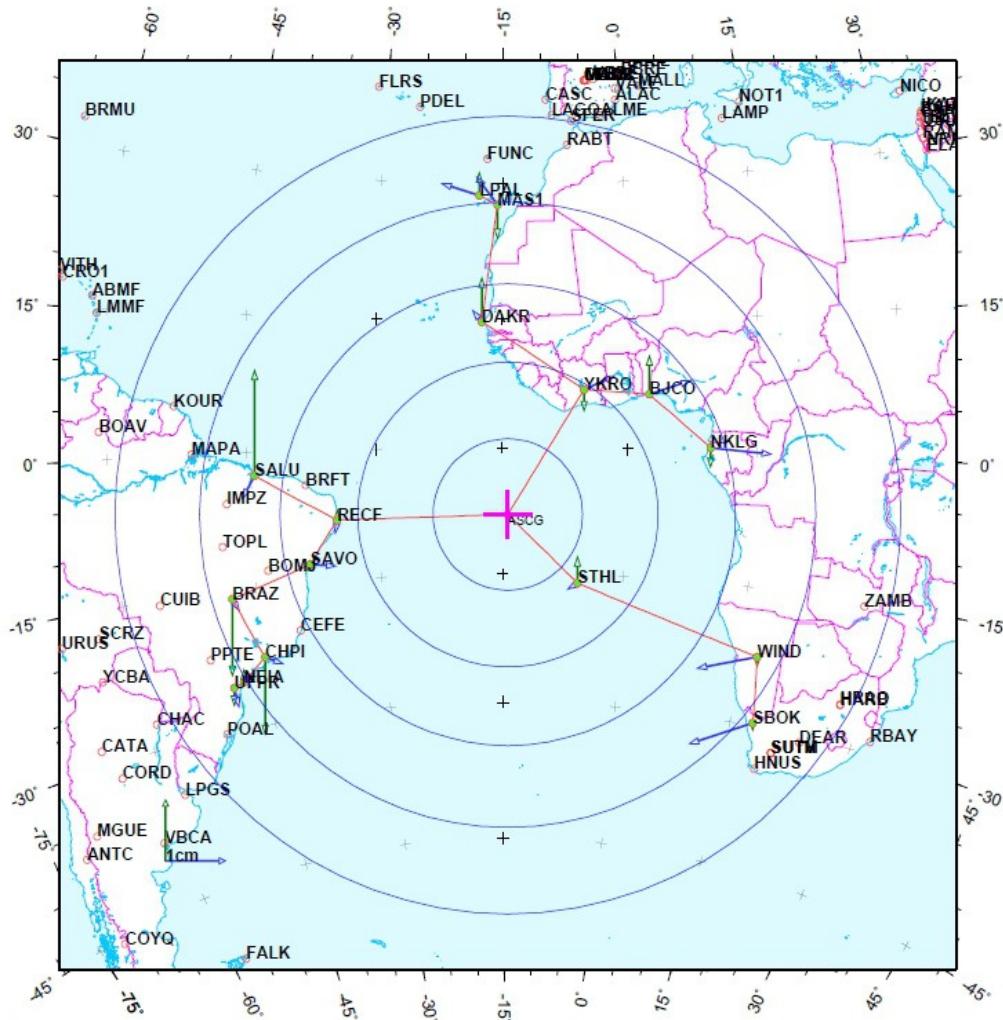

- Assessment of the Root Mean Square errors of the combined solution.
- Assessment of consistency between the daily solutions (repeatability).
- Assessment of alignment of the combined solution to the IGS08 reference frame.

▪ Daily processing steps

7 daily data sessions have been processed, from 02 August 2015 to 08 August 2015 based on a network integer ambiguity fixed solution from ionosphere free double difference processing using IGS precise ephemeris and earth orientation parameters.

Each daily solution has been validated according to :

- Ambiguity integer fixed results
- Variance factor range
- Helmert adaptation from IGS stations computed coordinates to actual ones

■ Session Combination

Daily normal equations were merged using a least squares adjustment process in order to provide a final reference free combined solution. The residuals of the individual solutions with respect to the combined one have been computed and checked. The Root Mean Square errors and the consistency between the daily solutions (repeatability) were assessed.

o Root Mean Square errors

Next table shows the Root Mean Square errors of the combined solution (**mm** in East, North and Up component).

Station	DOMES number	E RMS	N RMS	U RMS
ASCG_ARP	-	1.0	0.8	1.7
BJCO	32701M001	1.2	0.9	1.6
BRAZ	41606M001	1.3	0.9	1.5

◦ **IGb08 epoch alignment**

The combined solution has been Helmert-aligned to IGb08 at mid-epoch of data set, i.e. 2015:217. Residuals have been checked to assess consistency of this solution. Due to their significant residuals, stations in italic were not taken into account to establish Helmert parameters.

6.4. Leica Geo Office report file

Local GNSS observations were processed with Leica Geo Office V8.3

Récapitulatif du Traitement

ASCG

Informations sur le Projet

Nom du Projet:	ASCG
Date de création:	07/24/2015 13:21:21
Fuseau Horaire:	1h 00'
Nom Syst. Coordonnées:	WGS 1984
Logiciel d'application:	LEICA Geo Office 8.3
Date et heure de début:	07/23/2015 14:00:43
Date et heure de fin:	07/25/2015 18:57:43
Points occupés manuellement:	3
Noyau de Post-Traitement:	PSI-Pro 3.0
Traité:	06/16/2016 15:51:19

Paramètres de Traitement

Paramètres	Sélectionnés
Angle de Coupe:	3°
Type d'Ephémérides:	Précises
Type de solution:	Automatique
Type GNSS:	Automatique
Fréquence:	Automatique
Fixer les ambiguïtés jusqu'à:	80 km
Durée mini pour solution flottante (statique):	5' 00"
Taux d'échantillonnage:	Tout Utiliser
Modèle Troposphérique:	Hopfield
Modèle Ionosphérique:	Automatique
Utiliser modélisation statistique:	Oui
Distance mini.:	8 km
Activité ionosphérique:	Automatique

SUMMARY OF SELECTED OPTIONS

OPTION	SELECTION
Computation Mode	Adjustment
Maximum Iterations	15
Convergence Criterion	0.00010
Residual Rejection Criterion	Tau Max
Confidence Region Types	1D 2D 3D Station
Variance Factor (VF) Known	Yes
Scale Covariance Matrix With VF	Yes
Scale Residual Variances With VF	No
Force Convergence in Max Iters	No
Distances Contribute To Heights	No
Compute Full Inverse	Yes
Optimize Band Width	Yes
Generate Initial Coordinates	Yes
Re-Transform Obs After 1st Pass	Yes
Geoid Interpolation Method	Bi-Quadratic

STATISTICS SUMMARY

Residual Critical Value Type	Tau Max
Residual Critical Value	3.7941
Number of Flagged Residuals	0
Convergence Criterion	0.0001
Final Iteration Counter Value	2
Confidence Level Used	95.0000
Estimated Variance Factor	1.2171
Number of Degrees of Freedom	157

Chi-Square Test on the Variance Factor:

9.8707e-01 < 1.0000 < 1.5385e+00 ?

THE TEST PASSES

NOTE: All confidence regions were computed using the following factors:

Variance factor used	=	1.2171
1-D expansion factor	=	1.9600
2-D expansion factor	=	2.4477
3-D expansion factor	=	2.7955

Note that, for relative confidence regions, precisions are computed from the ratio of the major semi-axis and the spatial distance between the two stations.
