## Introduction

The ITRF is the result of a combination of different terrestrial reference frames provided by four space geodetic techniques GPS, VLBI, SLR and DORIS. To perform this combination between independent reference frames, it is necessary to have some co-location sites where the various techniques are observing and whose tie vectors between their reference points have been surveyed in three dimensions. Many co-location sites have been identified and some of them have missing or inconsistent ties. Furthermore, new instruments may be installed or replaced on these sites. Then, the ties with the existant techniques on the site have to be determined.

In this frame, it has been decided as one of the top priorities to survey Hartebeesthoek co-location site (South Africa). Indeed, this site is one of only two sites where the four techniques are currently observing. Some of the ties at Hartebeesthoek were missing, and others were inconsistent.

This document presents the results of the Hartebeesthoek local ties survey with as many details of the observations and the computations as necessary to fully understand what the resulting SINEX file means. A paper titled “Hartebeesthoek Co-location Survey” was also published by some people from the survey team in the IERS Technical note n°33 “Hartebeesthoek Co-location Survey”.

## 1. Co-location site description

The Hartebeesthoek co-location site is located in the Gauteng province, in a valley in the Magaliesberg hills, 50 km west of Johannesburg, South Africa.

Institut Géographique National Direction de la Production Service de Géodésie et de Nivellement	Hartebeesthoek Co-location Survey	RT/G 61 Page 4 / 146 Version : 1      Révision : 0 Date 27/06/2005
---	--------------------------------------	---

Hartebeesthoek co-location site can be divided into two subsites distant by about 3 km and each one covering an area of about 300 meters.

For each subsite, a local control network was set up, from which the instruments were observed and tied together with GPS observations.

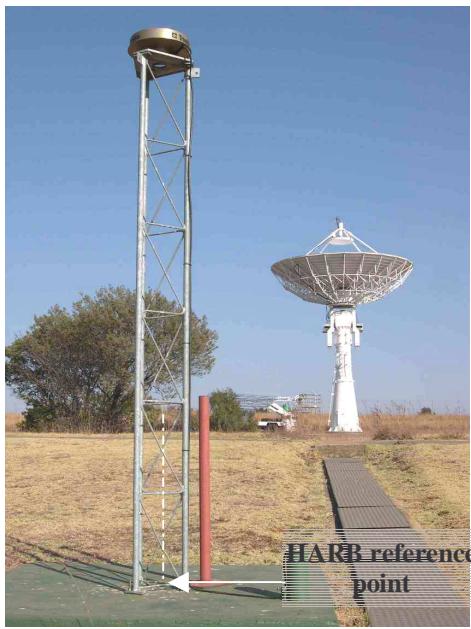

The first subsite is on HartRAO site. On this site, one can find a 26-meter VLBI radiotelescope, a 30-inch diameter SLR telescope (MOBLAS-6) and the IGS GPS station (HRAO). The site is organized so that 7 reinforced concrete piers surround the space geodetic instruments. These piers are 1.2 m to 3 m high and their diameter is 0.5 m. They are all equipped with self-centering devices and are mostly used for SLR calibration targets what gives an explanation about the tall height of the piers.

The second subsite is on the Satellite Application Centre (SAC) site. A DORIS antenna is installed, very close to another IGS GPS permanent station (HARB). Three pillars equipped with self-centering devices have been set up around this site.

The 2 subsites were tied together using the 2 IGS GPS permanent stations observations.

## 1.1. ITRF space geodetic techniques

### 1.1.1. HRAO and HARB IGS GPS stations

DOMES number : 30302M004	DOMES number : 30302M009
 <p>HRAO reference point</p> <p>HRAO groundmark and antenna</p>	 <p>HARB reference point</p> <p>HARB ground mark and antenna</p>

The stations reference points are a mark distinct from the antenna ones.  
(cf annexes 5.1 and 5.2).

Institut Géographique National Direction de la Production Service de Géodésie et de Nivellement	Hartebeesthoek Co-location Survey	RT/G 61 Page 5 / 146 Version : 1 Révision : 0 Date 27/06/2005
---	--------------------------------------	--

### 1.1.2. SLR station

*Building hosting SLR telescope*

*Global view of the telescope*

The SLR measurements refer to a point in the telescope where the two rotation axes intersect. This reference point can not be materialized. The offset from the top of the SLR telescope to the horizontal axis is **0.489 m**

The SLR System Reference Point (SRP) is a groundmark as described in the site log (cf annexe 5.3.).

**DOMES NUMBER : 30302M003**

*SLR System Reference Point (SRP)*

Institut Géographique National Direction de la Production Service de Géodésie et de Nivellement	Hartebeesthoek Co-location Survey	RT/G 61 Page 6 / 146 Version : 1 Révision : 0 Date 27/06/2005
---	--------------------------------------	--

### 1.1.3. DORIS antenna

DORIS mark (30302M008)

30302S006  
(HBKB)

DORIS ground mark  
(30302M008)

DORIS antenna on its support

This antenna and its support have been installed in year 2000. The antenna support is an aluminium plate that has been levelled.

The DORIS antenna reference point (HBKB) which is the reference point for ITRF solutions, is in this case, a red ring mark, 0.390 m above the base.

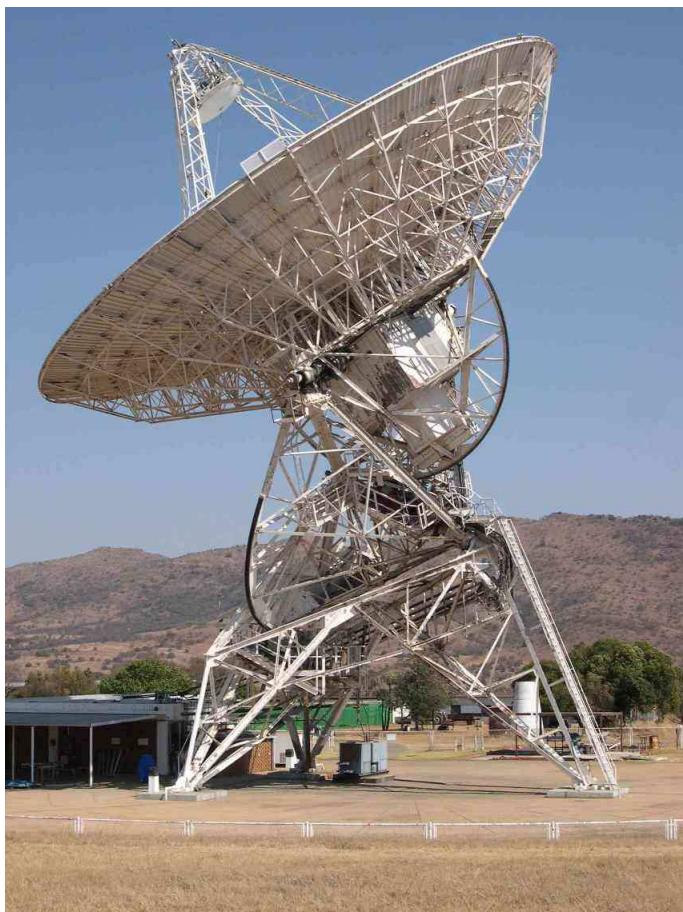

A ground mark is set up on the top of the metallic mast.

HBKB reference point DOMES number is **30302S006** and DORIS groundmark DOMES number is **30302M008**. The site log is presented in Annexe 5.5.

Institut Géographique National Direction de la Production Service de Géodésie et de Nivellement	Hartebeesthoek Co-location Survey	RT/G 61 Page 7 / 146 Version : 1 Révision : 0 Date 27/06/2005
---	--------------------------------------	--

#### 1.1.4. VLBI antenna

**DOMES number : 30302S001**

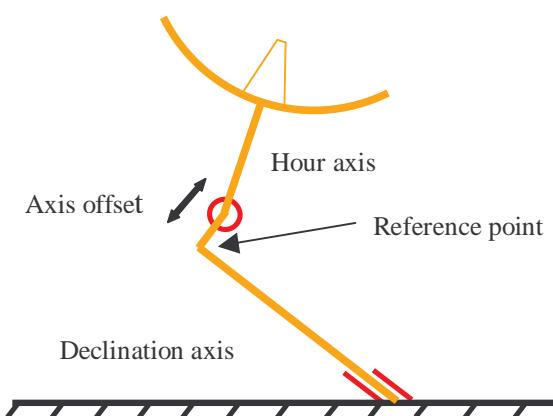

*Global view of the VLBI antenna*

Reference  
benchmark  
V100

For the VLBI antenna, the measurement data is received at the phase center of the receiver feed horn. The VLBI reference point is generally described as the point where the two rotation axes intersect. But for this antenna type, the rotation axes do not intersect, and in this case the VLBI reference point is described as the point represented by the intersection of the fixed axis (Hour Axis) with the perpendicular plane containing the moving one (Declination Axis).

Institut Géographique National Direction de la Production Service de Géodésie et de Nivellement	Hartebeesthoek Co-location Survey	RT/G 61  Page 8 / 146 Version : 1      Révision : 0 Date 27/06/2005
---	--------------------------------------	---

One of the 4 concrete blocks of the VLBI antenna platform is equipped with a levelling benchmark V100 for stability check.

### 1.2. Other points of interest

For each subsite, a local control network was set up, from which the instruments were observed and tied together with GPS observations. The control network includes some existing and new piers.

- HartRAO subsite : 7 reinforced concrete piers (6 existings and one new) surrounding the space geodetic instruments were used. These piers are 1.2 m to 3 m high and their diameter is 0.5 m. They are all equipped with self-centering devices and are mostly used for SLR calibration targets what gives an explanation about the tall height of the piers. A levelling benchmark was embedded at the base.  
(cf Annexe 5.7.)
- SAC subsite : 3 pillars equipped with self-centering devices have been set up around this site. All the piers are concrete piers with forced-centering devices embedded in the top. 2 piers are equiped with levelling benchmarks.

## 2. Survey description

### 2.1. Organization

The local ties survey of Hartebeesthoek co-location site is a cooperative project in which the four following agencies participated :

- Hartebeesthoek Radio Astronomy Observatory (HartRAO)
- NASA Goddard Space Flight Center (GSFC)
- Institut Géographique National (IGN)
- South African Department of Land Affairs.

The survey team gathered 5 members : Jim Long, coming from NASA GSFC who has experience in numerous local ties surveys ; Valérie Michel, Céline Corbière and Georgia Roesch from the Special Works unit of IGN, which mainly deals with micro-geodesy and metrology ; and Sean Dane from Surveys and Mapping service of the South African Department of Land Affairs. Also, this project took many benefits of support from the HartRAO personnel and facilities, such as the workshop.

The survey took place from July, the 22<sup>nd</sup> to August, the 12<sup>th</sup> 2003. The meteorological conditions have been very appropriate for such a fieldwork since it was sunny almost everyday and all the outside work was easy to plan, even if in a topometric sense the bright sun is not always an advantage during the measurements. Furthermore, in planning the survey work, it was necessary to coordinate with the astronomic observations planning for the VLBI and SLR.

Institut Géographique National Direction de la Production Service de Géodésie et de Nivellement	Hartebeesthoek Co-location Survey	RT/G 61  Page 9 / 146 Version : 1      Révision : 0 Date 27/06/2005
---	--------------------------------------	---

## 2.2. Equipments

All the topometric survey instruments and equipments belong to IGN or NASA and had been temporarily imported for the needs of the survey.

### 2.2.1. Instruments

Leica total stations (TC2002 and TDA5005) were used. Those total stations, which are regularly calibrated at IGN's calibration unit, have a standard deviation of 0.15 mgon about angles and 1 mm + 1 ppm about distances. Two Leica accurate corner cube reflectors (GPHP1P), which are calibrated with the total stations were used to determine distances.

For the altimetric observations, an electronic level (Leica NA3003) and invar bar code levelling rods were used. This equipment, regularly calibrated at IGN's calibration unit, has a resolution of 0.01 mm.

For the GPS observations, four Leica SR530 receivers with Leica AT504 choke ring antennas were used.

All these instruments allowed the observations to be recorded electronically on PCMCIA cards or REC modules and then downloaded to laptop PC for processing.

### 2.2.2. Equipment and accessories

Several very useful accessories have also been brought for this type of fieldworks. These accessories included such items as :

- § heavy tripods in order to ensure the stability of temporary stations ;
- § translation stage in order to center a target on a vertical rotation axis ;

- § 0.5 m, 1.8 m and 3.0 m long Invar levelling rods that are all calibrated and associated to each other ;
- § calibrated trefoils targets, prisms ;
- § trivet plates and tribachs regularly calibrated.

Equipments for construction were also used.

Institut Géographique National Direction de la Production Service de Géodésie et de Nivellement	Hartebeesthoek Co-location Survey	RT/G 61  Page 10 / 146 Version : 1      Révision : 0 Date   27/06/2005
---	--------------------------------------	--

## 2.3. General overview

The 2 subsites were considered as 2 individual survey control networks including space geodetic techniques instruments. For each of them, all the survey was conducted in order to provide the highest accuracy in the determination of the 3D vectors between the observing instruments. It mixed GPS (mainly for orientation) and topometric observations.

In order to tie the two local control networks and include them into a common ITRF reference frame, the 2 IGS GPS permanent stations observations during all the campaign were used.

## 2.4. Survey control network observations

All the visible lines of sights have been observed with the tacheometers described in 2.2.1. Horizontal directions and zenith distances were observed in sets, with each set consisting of one reading in both direct and reverse telescope positions. Any observed angle was rejected if the difference between the two circles was greater than 1mgon. Distance measurements were observed over each line one time in both direct and reverse positions. Meteorological data (atmospheric pressure and temperature) were recorded at the beginning of each station.

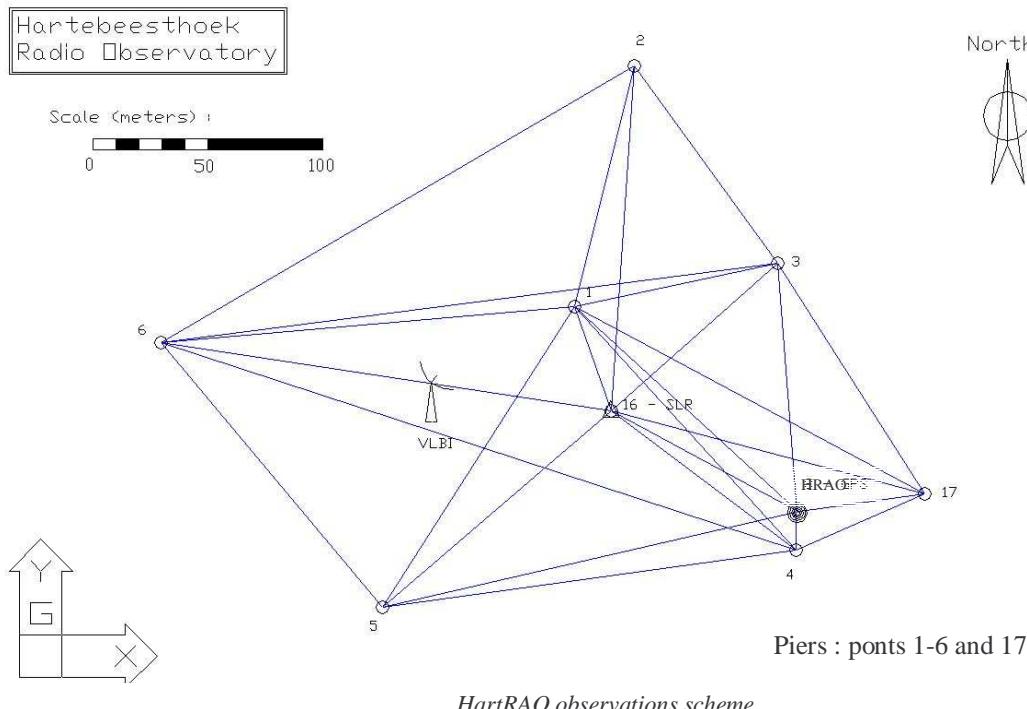

All the piers are concrete piers with forced-centering devices embedded in the top. During the observations, Wild or IGN trivet plates were used, which ensured that the targets and total stations were always on the same planimetric position. On each pier, two different total stations have been set up and two different operators observed, in order to avoid any systematic effect. The heights above the reference point of each monument were measured after each setup on three different points with a calliper rule.

As far as direct levelling is concerned, a forward run and a backward run were observed between each benchmark. Before each workday, the instrument collimation was checked. The electronic level instrument was set to perform two readings on bar code rod, and that measurement was rejected if the difference between the two readings was greater than 0.04 mm. In the same way, if the difference between the two runs was greater than  $0.1 \text{ mm } \sqrt{n}$ , with n number of traverse legs, a third run was completed.

Some of the piers of the ground control networks were too high to be levelled by direct levelling. Therefore, indirect levelling was done between the benchmark installed on the pier and a target on the top of the pier.

### 2.4.1. HartRAO observations polygon

This control network polygon includes 6 concrete piers, the SLR telescope (a total station has been set up on the top of the telescope right on the vertical axis), the IGS GPS antenna (which has been intersected). The VLBI can also be included in this polygon, since a particular moving point has been observed using the 6 piers.

#### 2.4.1.1. SLR System Reference Point (SRP)

The reference point has been determined in two successive steps : the first one to materialize its planimetric position, the second one to determine the vertical eccentricity between the reference point and the planimetric materialization.

The SLR vertical axis rotation had to be in a first time determined and after that be marked. To determine its position, from one total station set up on a heavy tripod, a target on the translation stage was sighted and the direction recorded. The SLR has been rotated  $180^\circ$  around the vertical axis, and the same target sighted again. Then the translation stage was adjusted of half the difference between the two directions. The same procedure was followed with the SLR telescope oriented at  $90^\circ$  from the original position. This operation was repeated until the target doesn't move, when sighted with the total station, regardless the direction the SLR is pointing.

In a second time, this rotation axis, determined as described above, was marked on the brass disk of the ground mark. Two different methods were used and they agreed to less than 1mm :

- NASA-GSFC method : using 3 total stations in 3 different directions, the operator sighted the target on the top of the SLR, and went vertically down to the ground mark. The point was then determined using graphical method.
- IGN method : using 3 total stations in 3 different directions, the operator sighted the target on the top of the SLR, and went vertically down to a target on a translation stage above the brass part. By iteration, the target was brought to the SLR axis. A needle took the place of the target on the translation stage thus sticking the brass disk.

The horizontal axis was not determined during this survey. The previously determined value of 0.489 m was used for the offset from the top of the SLR telescope to the horizontal rotation axis.

Institut Géographique National Direction de la Production Service de Géodésie et de Nivellement	Hartebeesthoek Co-location Survey	RT/G 61 Page 12 / 146 Version : 1 Révision : 0 Date 27/06/2005
---	--------------------------------------	---

#### 2.4.1.2. VLBI reference point

A special target was installed on the apex of the antenna quadripod, to be visible from as many survey control monuments as possible. The hour / declination mount of this antenna made the observation of the antenna difficult since the dish of the antenna hides much of the structure from view when rotating around one of the axes. The apex was the only point that could be observed from three piers during the whole required rotations of the antenna. Indeed, this target was determined by intersections from three piers with three different total stations.

Target

Target at the apex

The antenna was rotated around the axis to be determined, in increments of about 10 degrees, causing the target to describe an arc of a circle around the axis of rotation. Several arcs for each axis (3 around declination axis and 2 around hour angle axis) were observed. At each increment, horizontal directions and zenithal distances were measured.

The declination axis has been observed in three different hour angle positions by rotating the antenna around the declination axis. The hour angle wheel (big wheel) was in position 0°, and the declination wheel (small wheel) went from southern limit to northern limit by step of 10°, 14 points were observed (-85° to +48°). The same operation was done with the hour angle wheel at +19° west and -25° east.

In the same idea, the hour angle axis has been observed by rotating the antenna around the hour angle axis in two different declination positions. The declination angle was held fixed on the position where zenith is achievable, and the big wheel went from western limit to eastern limit by step of 10°, 17 points were observed (+85° to -85°). This operation was repeated with declination angle set at 50°.

		HOUR ANGLE	DECLINATION ANGLE	NUMBER OF POINTS
DECLINATION AXIS	Position 1	-25°	45° - 275°	14
	Position 2	0°	45° - 275°	14
	Position 3	19°	45° - 275°	14
HOUR AXIS	Position 1	85° - 275°	309°	17
	Position 2	85° - 275°	334.112°	19

Institut Géographique National Direction de la Production Service de Géodésie et de Nivellement	Hartebeesthoek Co-location Survey	RT/G 61 Page 13 / 146 Version : 1 Révision : 0 Date 27/06/2005
---	--------------------------------------	---

#### 2.4.1.3. HRAO GPS antenna intersections

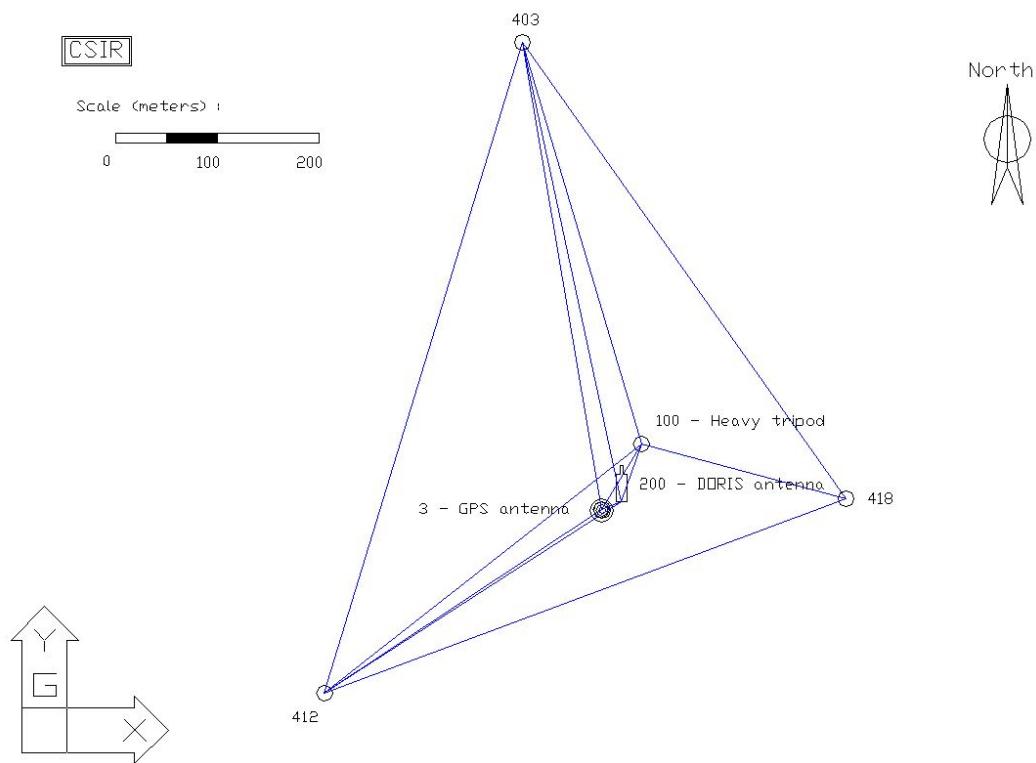

In order to find the planimetric position of the antenna, the directions tangent to the left and the right hand sides of the choke ring antenna were observed from all the stations of the polygonation from which the antenna was visible, i.e. 6 stations. In the adjustment, the mean direction of two observations from a same station, was used to process the planimetric position.

The antenna height was measured by direct levelling on three different points on the top of the choke ring antenna. The mean of the three observations was corrected to account for the difference in height from the top of the choke ring to the Antenna Reference Point (ARP).

Annexe 5.8. shows some elements on HRAO GPS antenna observations.

#### 2.4.2. SAC polygon observations

This control network polygon includes 3 concrete piers, one temporary station on a heavy tripod, the DORIS pillar and the IGS GPS antenna on a steel tower.

#### 2.4.2.1. DORIS reference point

After having verified the antenna verticality and centering above the DORIS mark, this point has been included in the polygonation : a target was installed on the metallic mast, instead of the DORIS antenna during the polygonation using a special forced-centering interface. A GPS antenna was also installed on the metallic mast after the polygonation. The different heights were measured to 0.001 m.

Institut Géographique National Direction de la Production Service de Géodésie et de Nivellement	Hartebeesthoek Co-location Survey	RT/G 61  Page 14 / 146 Version : 1      Révision : 0 Date 27/06/2005
---	--------------------------------------	--

To determine the altimetric position of the red ring mark (HBKB DORIS reference point), located at about 0.390 m above the base, direct levelling was done using direct inverse rod on 3 three different points on the antenna base.

#### **2.4.2.2. HARB GPS antenna intersections**

The directions tangent to the left and the right hand sides of the choke ring antenna were observed from all the polygonation stations from which the antenna was visible, ie. 4 stations. In the adjustment, the mean of each pair of observations was used to process the planimetric intersection.

The antenna height was measured by direct levelling on three different places under the choke ring antenna using reverse rod. Then, the mean of the three observations was corrected to account for the difference in height between the bottom of the choke ring and the ARP.

### **2.5. GPS observations**

In order to tie the two local control networks and to provide ITRF orientation, three sessions of 5 hours on three different days with a recording rate of 30 s have been observed. During each session, four different stations were set up, 2 on each subsite and at least 6 satellites were visible.

For each session, 6 points are observed at a given time : the 2 permanent stations HARB and HRAO, 3 pier stations on HartRAO site, 3 temporary stations on SAC site.

The GPS observations of HRAO and HARB IGS permanent stations have been used during the whole survey, from DOY 212 (July, 31<sup>st</sup>) to DOY 216 (August, 4<sup>th</sup>).

The GPS observations for the DORIS plate, the piers and the temporary stations, were carried out during the survey with LEIAT504 GPS antennas and the following specifications :

- § Cutoff angle 10°
- § Data recording rate 30 s

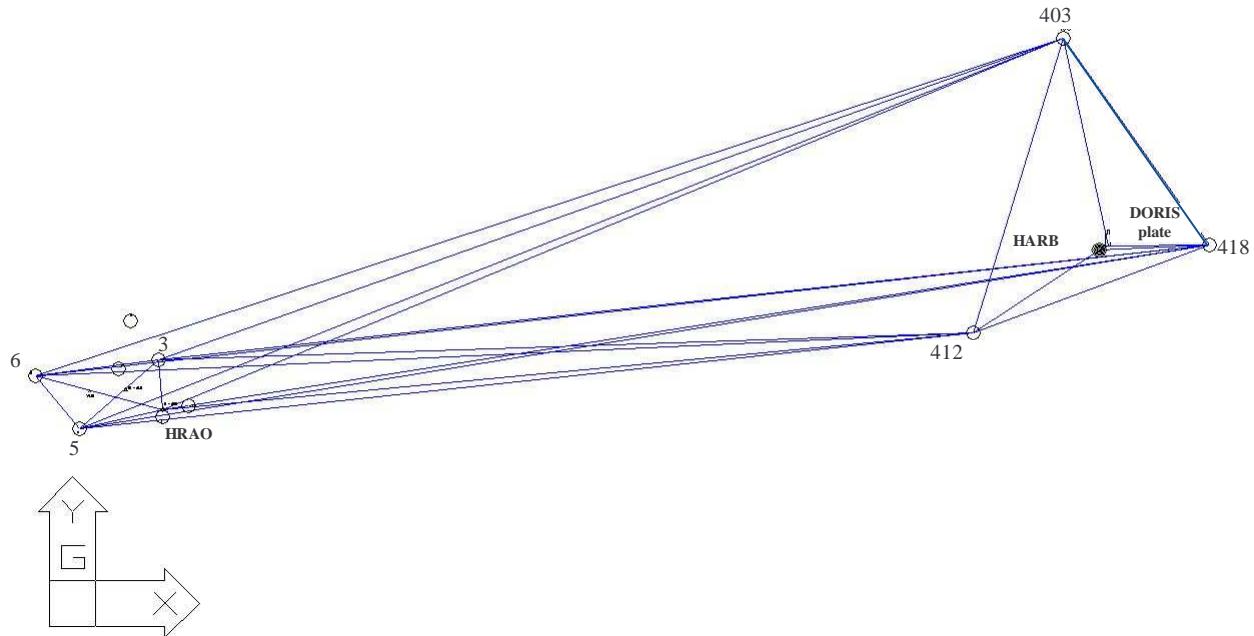

The following table presents the different sessions :

Point	Start (UT)	End (TU)	Ant. Height (m)	Ant. Type
DORIS plate	DOY 216 06:55	DOY 216 12:34	N,E 0.000 UP 0.3127	LEIAT504 (IGS standards)
Pier 3 (top and center of platform)	DOY 212 05:59	DOY 212 11:42	N,E 0.0000 UP 0.2410	
	DOY 213 05:57	DOY 213 14:23	N,E 0.0000 UP 0.2370

Pier 6 (top and center of platform)	DOY 212 06:10	DOY 212 11:53	N,E 0.0000 UP 0.2330	
	DOY 216 06:51	DOY 216 13:32	N,E 0.0000 UP 0.2340	

Institut Géographique National Direction de la Production Service de Géodésie et de Nivellement	Hartebeesthoek Co-location Survey	RT/G 61 Page 15 / 146 Version : 1 Révision : 0 Date 27/06/2005
---	--------------------------------------	---

Point	Start (UT)	End (TU)	Ant. Height (m)	Ant. Type
403 (top and center of heavy tripod)	DOY 213 10:59	DOY 213 14:27	N,E 0.0000 Up 0.1890	
412 (top and center of heavy tripod)	DOY 212 06:01 DOY 213 05:46	DOY 212 11:58 DOY 213 14:45	N,E 0.0000 Up 0.2320 N,E 0.0000 Up 0.2300	
418 (top and center of heavy tripod)	DOY 212 06:26 DOY 213 06:02 DOY 216 07:06	DOY 212 12:15 DOY 213 10:02 DOY 216 12:56	N,E 0.0000 Up 0.2380 N,E 0.0000 Up 0.2410 N,E 0.0000 Up 0.2310	

All the antenna heights are related to the GPS antenna reference point. They were measured to 0.001 m.

### 3. Computations

#### 3.1. On-site validation

##### 3.1.1. Ground control networks

Each local control network has been pre-processed on site in order to point out any problems consequently to observations. The observations have been checked in a local coordinate system by a 3D least squares adjustment with the software COMP3D developed at IGN by Y. EGELS.

The blunders have been detected and the precision has been estimated in order to check if the requirements of such a survey were achieved.

Institut Géographique National Direction de la Production Service de Géodésie et de Nivellement	Hartebeesthoek Co-location Survey	RT/G 61 Page 16 / 146 Version : 1      Révision : 0 Date 27/06/2005
---	--------------------------------------	--

The a priori standard deviations for the different observations from tacheometers are :

- § 0.5 mgon for horizontal angles,
- § 0.8 mgon for vertical angles,
- § 1 mm + 1 ppm for distances,

The levelling observations have also been validated on site by adjustments between 2 successive benchmarks, then by independent adjustments of the 2 subsites. The precision was about 0.5 mm for HartRAO levelling network and 0.6 mm for SAC levelling network.

### 3.1.2. GPS

The GPS baselines have been processed on site to check the ambiguities resolution.

## 3.2. GPS network

The GPS baselines have been processed with BERNESE software version 4.2.

The antenna heights from the HRAO and HARB logsheets were used to get the stations reference point positions.

The main features of the adopted processing strategy are presented in the following table :

Measurement models	<ul style="list-style-type: none"> <li>• DE200 planetary ephemeris model</li> <li>• Earth potential model : JGM3</li> <li>• Ground antenna : IGS/NGS elevation-dependent phase center models (cf annexe 5.)</li> <li>• Solid Earth tides applied (IERS Conventions96)</li> <li>• Orbit and ERPs : IGS final products</li> </ul>
Processing parameters	<ul style="list-style-type: none"> <li>• Elevation dependant weighting</li> <li>• Elevation angle cutoff : 10 degrees</li> <li>• Troposphere model : Saastamoinen</li> </ul>
Estimated parameters :	<ul style="list-style-type: none"> <li>• Adjustment : Weighted least-squares algorithms</li> <li>• Ambiguity resolution : different strategies according to the length of the baselines <ul style="list-style-type: none"> <li>- QIF strategy</li> <li>- SIGMA strategy</li> </ul> </li> <li>• Solved ambiguities introduced into daily solutions</li> <li>• Daily final solutions : different strategies according to the length of the baselines <ul style="list-style-type: none"> <li>- L1 solution for short baselines at the 2 subsites</li> <li>- Ionosphere free solutions for the connexion between them</li> </ul> </li> <li>• Constrained solutions (no stations fixed)</li> <li>• No troposphere zenith delays estimation</li> </ul>

Daily solutions were produced and correlations correctly modelled. The corresponding NEQs were combined using ADDNEQ program providing a full covariance matrix given in annexe 5.9. For this solution, the reference point (HRAO GPS stations) has been heavily constrained (0.1 mm) to its ITRF2000 coordinates at epoch 2003:214.

### 3.3. VLBI Reference point

The first computations were done in the local topocentric network that was defined by the polygon of HartRAO site. By rotating the antenna around one of the axis holding the other one blocked, the target describes an arc of a circle. The plane in which the circle is drawn is normal to the rotation axis around which the antenna is moving. This rotation axis crosses the plane in the centre of the circle.

The 5 plane and circle fittings have been computed by programs developed on the Matlab 6.1 software. A first on-site program has been developed in order to check the quality of the target positions determinations and the precision to fitting a circle. Then a more elaborate program takes into account the variances-covariances matrix of the polygon and the target positions to compute the circle fittings.

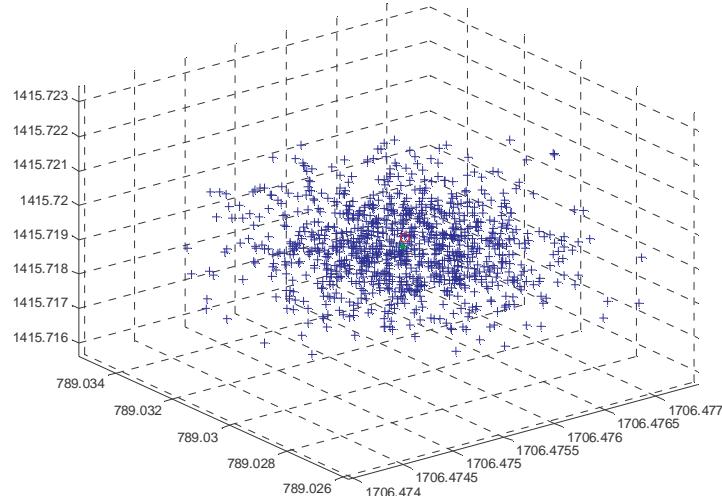

2 views of the circle and plane fittings for the 5 rotations in the local topocentric network

As far as the primary axis is concerned, one arc lets the axis be determined. The problem is then over-determined since 2 arcs have been observed, which leads to a check and an evaluation of the precision.

For the secondary axis, each of the 3 arcs defines a position of the secondary axis. However, the angles between each secondary planes and the primary plane have to be constant (and even right angles). Furthermore, the distances between each secondary axis and the primary axis have to be equal. Therefore, a control of the data does exist for the secondary axis too.

The VLBI reference point is the closest point of the primary axis to the secondary axis. The axis offset is the distance between primary and secondary axis.

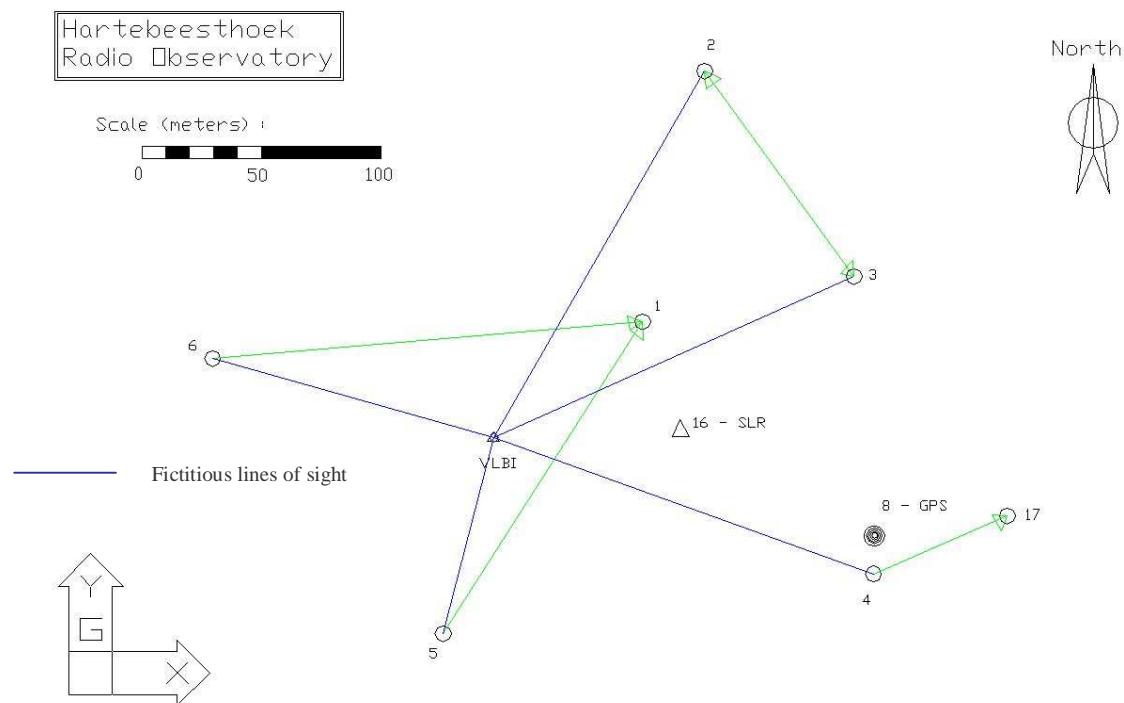

In order to get an idea of the precision, a Monte-Carlo algorithm has been implemented. The precision of the reference point estimated by the Monte-Carlo method is 0.5 mm in x-direction, 1.6 mm in y-direction and 1.1 mm in z-direction. The axis offset is  $6.695 \text{ m} \pm 2.5 \text{ mm}$ .

Monte-Carlo distribution of the estimated point position expressed in a local reference frame (m)

Institut Géographique National Direction de la Production Service de Géodésie et de Nivellement	Hartebeesthoek Co-location Survey	RT/G 61 Page 19 / 146 Version : 1      Révision : 0 Date 27/06/2005
---	--------------------------------------	--

Given the position of the reference point and its precision, a set of fictitious observations have been computed with their associated precision. These fictitious observations correspond to fictitious horizontal and vertical angles that would be measured from the piers of the polygon to the VLBI reference point. They were introduced in HartRAO polygon.

All this study has been led in HartRAO local topocentric network and Matlab 6.1. was the main developing environment.

### 3.4. HartRAO and SAC survey networks

The final analysis of each network observations has been carried out with Microsearch GeoLab 2001 software, 2001.9.20.0 version. In order to have the best relative accuracy between the points, the input files were developed from all the topometric observations only (distances, horizontal and zenithal angles, direct levelling planimetric and altimetric centerings) and GPS results have been used to define local frames as follows :

- HartRAO
  - Origin : HRAO coordinates heavily constrained
  - Orientation : azimuth between piers 3 and 5
- SAC
  - Origin : HARB coordinates heavily constrained
  - Orientation : azimuth between piers 412 and 403 temporary stations

Institut Géographique National Direction de la Production Service de Géodésie et de Nivellement	Hartebeesthoek Co-location Survey	RT/G 61 Page 20 / 146 Version : 1      Révision : 0 Date 27/06/2005
---	--------------------------------------	--

These two “topometric” adjustments give us coordinates and a covariance matrix for all the points of surveys. The results for the points of interest are :

- HartRAO network

Adjusted XYZ Coordinates:

CODE	FFF	STATION	X-COORDINATE	Y-COORDINATE	Z-COORDINATE

Institut Géographique National Direction de la Production Service de Géodésie et de Nivellement	Hartebeesthoek Co-location Survey	RT/G 61 Page 21 / 146 Version : 1 Révision : 0 Date 27/06/2005
---	--------------------------------------	---

The full results are presented in annexe 5.10. and annexe 5.12., and the covariance matrices in annexe 5.11. and 5.13.

It could be helpful to know the station name translation table used for the computation :

Point description	Used name or code	Computation name
HRAO IGS reference point	30302M004	8GPS
HARB IGS reference point	30302M009	3GPS
HARB IGS antenna reference point	HARB ARP	3
VLBI reference point	30302S001	7232
SLR System Reference Point (SRP)	30302M003	7501
SLR measurements reference point	SLR optic centre	16_C
DORIS reference point	30302S006	DORIS
DORIS mark	30302M008	200_P
Piers 1 to 17		1_P / 2_P / 3_P / 4_P / 5_P / 6_P / 17_P

### 3.4.1. The SLR measurements point eccentricity

During the survey, the eccentricity of the System Reference Point (SRP) to the measurements point (intersection of the vertical and horizontal axis of the telescope) has been observed and computed with an accuracy of about **0.2 mm**. The resulted following values have been obtained and used in the final SINEX :

	IGN Survey	Site log (cf Annexe 5.3)
North (m)	<b>-0.0006</b>	<b>-0.003</b>
East (m)	<b>-0.0060</b>	<b>-0.006</b>
Up (m)	<b>3.2271</b>	<b>3.228</b>

This eccentricity had been observed in year 2000 with an accuracy of about 1 mm, when the new telescope was installed. These values are still used by the analysis centers to reduce the SLR observations to the reference point (cf annexe 5.3)

### 3.4.2. HARB GPS antenna height

During the survey, the antenna height between the antenna reference point (ARP) and the marker has been observed and computed with an accuracy better than 0.2 mm. This value has not been used for the GPS computation, but for the survey results.

	Survey	Site log (cf Annexe 5.2)
Antenna height (m)	3.0557	3.052

Institut Géographique National Direction de la Production Service de Géodésie et de Nivellement	Hartebeesthoek Co-location Survey	RT/G 61 Page 22 / 146 Version : 1 Révision : 0 Date 27/06/2005
---	--------------------------------------	---

### 3.4.3. DORIS reference point

The resulting height of the DORIS reference point above the DORIS mark is **0.5047 m**.  
The top of the plate is **0.1097 m** over the DORIS mark

## 4. Results

The final results have been processed with the “Microsearch GeoLab 2001” software, 2001.9.20.0 version. The input files were developed from all the terrestrial observations of the 2 networks (distances, horizontal and vertical angles, planimetric and altimetric centerings, levelling) and the GPS baselines. Therefore, all the input data can be sorted as following :

- HartRAO polygon
- HartRAO levelling
- SAC polygon
- SAC levelling
- GPS network : GPS baselines expressed as set of points coordinates and the associated covariance matrix.

The ITRF2000 coordinates of HRAO IGS GPS station at epoch 2003:214 have been constrained at 0.1 mm. The GPS covaraince matrix has been weighted by the RMS given by Bernese computations. The adjustment has to deal with 684 observations in order to estimate 273 parameters.

The results are the coordinates of all the points referring to piers, space geodetic instruments as well as their confidence ellipsoids in the ITRF 2000 at the epoch of the observations.

Here is a table with the 3D confidence region at 95% of the 5 points of interest :

Adjusted XYZ Coordinates:			X-COORDINATE STD DEV	Y-COORDINATE STD DEV	Z-COORDINATE STD DEV
CODE	FFF	STATION			
XYZ	30302M009	(HARB)	5084657.6352 0.0013	2670325.0847 0.0009	-2768481.1863 m 0.0009
XYZ	30302S001	(VLBI)	5085442.7806 0.0011	2668263.6119 0.0010	-2768696.9178 m 0.0012
XYZ	30302M003	(SLR)	5085401.1063 0.0009	2668330.2082 0.0006	-2768688.7728 m 0.0007

---	--------------------------------------	--

2-D and 1-D Relative Station Confidence Regions (95.000 and 95.000 percent):

FROM	TO	MAJ-SEMI	AZ	MIN-SEMI	VERTICAL	DISTANCE	PPM
30302M009	30302S001	0.0033	25	0.0022	0.0034	2216.4529	1.51
30302M009	30302M003	0.0020	41	0.0017	0.0031	2139.0122	0.93
30302M009	30302M004	0.0018	33	0.0015	0.0030	2065.8274	0.85
30302M009	30302S006	0.0024	54	0.0015	0.0021	24.8784	95.41
30302S001	30302M003	0.0029	21	0.0019	0.0016	78.9820	36.60
30302S001	30302M004	0.0032	20	0.0018	0.0024	163.7945	19.33
30302S001	30302S006	0.0037	28	0.0027	0.0040	2239.6707	1.67
30302M003	30302M004	0.0014	20	0.0011	0.0020	92.1872	15.46
30302M003	30302S006	0.0027	46	0.0023	0.0037	2162.2551	1.24
30302M004	30302S006	0.0026	42	0.0021	0.0036	2089.2980	1.22

The achieved relative accuracy (at a 95% confidence level) between the space geodetic technique reference points is less than 4 mm in the 3 dimensions.

Furthermore, the whole covariance matrix is computed and it is possible to extract covariance submatrix of reference points from

- HARO IGS GPS station 30302M004
- HARB IGS GPS station 30302M009
- HBKB DORIS station 30302S006
- SLR station 30302M003
- VLBI station 30302S001

The results and the full covariance matrix are presented in annexes 5.14. and 5.15. The covariance matrix has finally been converted into SINEX format using a special program from CATREF package. The resulting file is given in annexe 5.17.

The SINEX file has been introduced into the first ITRF 2004 computations by Zuheir Altamimi. The local ties, which were dubious, agree now at a mm level with the individual space geodetic technique solutions.

### 0. Form

Prepared by (full name) : Dave Stowers  
 Date Prepared : 2002-04-03  
 Report Type : UPDATE  
 If Update:  
 Previous Site Log : hrao0204.log  
 Modified/Added Sections : (n.n,n.n,...)

### 1. Site Identification of the GNSS Monument

Site Name : Hartebeesthoek RAO  
 Four Character ID : HRAO  
 Monument Inscription : (none)  
 IERS DOMES Number : 30302M004  
 CDP Number : (A4)  
 Monument Description : (PILLAR/BRASS PLATE/STEEL MAST/etc)  
 Height of the Monument : (m)  
 Monument Foundation : (STEEL RODS, CONCRETE BLOCK, ROOF, etc)  
 Foundation Depth : (m)  
 Marker Description : (CHISELLED CROSS/DIVOT/BRASS NAIL/etc)  
 Date Installed : 1996-09-05  
 Geologic Characteristic : BEDROCK  
 Bedrock Type : IGNEOUS  
 Bedrock Condition : JOINTED  
 Fracture Spacing : 1-10 cm  
 Fault zones nearby : (YES/NO/Name of the zone)  
 Distance/activity : (multiple lines)  
 Additional Information :  
   : HartRAO is located on the Pretoria Series of the  
   : Transvaal System. The territory occupied or else  
   : underlain by the System embraces the greater  
   : part of the Central Transvaal. The Transvaal  
   : System is of Precambrian age. The antenna and  
   : buildings are situated on Ongeluk Lava  
   : (Andesite).  
   : Geological information from "NASA Space Geodesy  
   : Program  
   : Technical Memorandum 4482, March 1993, p196.  
   : Interlocking steel rod 25 meters deep grouted on  
   : the bottom 10 meters and isolated in PVC for the  
   : next 15 meters.

### 2. Site Location Information

City or Town : Krugersdorp  
 State or Province :  
 Country : South Africa  
 Tectonic Plate : Africa plate, Kaapvaal Craton  
 Approximate Position (ITRF)  
 X coordinate (m) : 5085352.500  
 Y coordinate (m) : 2668395.681  
 Z coordinate (m) : -2768731.692  
 Latitude (N is +) : -255324.38  
 Longitude (E is +) : +0274113.12  
 Elevation (m,ellips.) : 1414.1877  
 Additional Information : Latitude, Longitude and Elevation derived from  
   : ITRF96 coordinates at epoch 1997.0, from Z.  
   : Altamimi/IGN.  
   : HartRAO is situated 60 km NW of Johannesburg.  
   : HartRao is a National Research Facility which  
   : operates within the foundation for Research  
   : Development.  
   : Site information from "NASA Space Geodesy  
   : Program  
   : Technical Memorandum 4482, March 1993, p196.

### 3. GNSS Receiver Information

3.1 Receiver Type : ROGUE SNR-8000  
 Satellite System : (GPS/GLONASS/GPS+GLONASS)  
 Serial Number : T365  
 Firmware Version : 3.2 link 03/09/95  
 Elevation Cutoff Setting : (deg)  
 Date Installed : 1996-09-05  
 Date Removed : (CCYY-MM-DDThh:mmZ)  
 Temperature Stabiliz. : (none or tolerance in degrees C)  
 Additional Information : (multiple lines)

3.2 Receiver Type : ROGUE SNR-12 RM  
 Satellite System : (GPS/GLONASS/GPS+GLONASS)  
 Serial Number : 254  
 Firmware Version : 3.2.32.4  
 Elevation Cutoff Setting : (deg)  
 Date Installed : 1998-01-14  
 Date Removed : (CCYY-MM-DDThh:mmZ)  
 Temperature Stabiliz. : (none or tolerance in degrees C)  
 Additional Information : replaced SNR 8 with SNR 12

3.3 Receiver Type : ROGUE SNR-12 RM  
 Satellite System : (GPS/GLONASS/GPS+GLONASS)  
 Serial Number : 254  
 Firmware Version : 3.2.32.8  
 Elevation Cutoff Setting : (deg)  
 Date Installed : 1999-05-25T12:30Z  
 Date Removed : 2000-04-16T00:00Z  
 Temperature Stabiliz. : (none or tolerance in degrees C)  
 Additional Information : (firmware upgrade)

3.4 Receiver Type : ASHTECH Z-XII3  
 Satellite System : (GPS/GLONASS/GPS+GLONASS)  
 Serial Number : LP019990511  
 Firmware Version : CC00 1s soc2rnx  
 Elevation Cutoff Setting : (deg)  
 Date Installed : 2000-04-26T12:30Z  
 Date Removed : (CCYY-MM-DDThh:mmZ)  
 Temperature Stabiliz. : (none or tolerance in degrees C)  
 Additional Information : replaced SNR 12 with Z12  
   : samplerate - 1s  
   : offload format - soc  
   : conversion to 30s - soc2rnx

3.x Receiver Type : (A20, from rcvr\_ant.tab; see instructions)  
 Satellite System : (GPS/GLONASS/GPS+GLONASS)  
 Serial Number : (A5)  
 Firmware Version : (A11)  
 Elevation Cutoff Setting : (deg)  
 Date Installed : (CCYY-MM-DDThh:mmZ)  
 Date Removed : (CCYY-MM-DDThh:mmZ)  
 Temperature Stabiliz. : (none or tolerance in degrees C)  
 Additional Information : (multiple lines)

### 4. GNSS Antenna Information

4.1 Antenna Type : AOAD/M\_T  
 Serial Number : 200  
 Antenna Reference Point : BPA  
 Marker->ARP Up Ecc. (m) : 0.0814  
 Marker->ARP North Ecc(m) : (F8.4)

## 5. Surveyed Local Ties

5.1 Tied Marker Name : 26 m VLBI antenna  
Tied Marker Usage : (SLR/VLBI/LOCAL CONTROL/FOOTPRINT/etc)  
Tied Marker CDP Number :  
Tied Marker DOMES Number : 30302S001  
Differential Components from GNSS Marker to the tied monument (ITRS)  
dx (m) : 90.280  
dy (m) : -132.198  
dz (m) : 34.658  
Accuracy (mm) : 10  
Survey method : (GPS CAMPAIGN/TRILATERATION/TRIANGULATION/etc)

Institut Géographique National Direction de la Production Service de Géodésie et de Nivellement	Hartebeesthoek Co-location Survey	RT/G 61 Page 28 / 146 Version : 1      Révision : 0 Date 27/06/2005
---	--------------------------------------	--

Date Measured : (CCYY-MM-DDThh:mmZ)  
Additional Information : ITRF96 coordinates epoch 1997  
: for HRAO and VLBI points differential  
: components  
: The SLR/VLBI/HRAO/HART/DORIS differential  
: components will be determined in a high  
: precision GPS survey later this year

5.x Tied Marker Name :  
Tied Marker Usage : (SLR/VLBI/LOCAL CONTROL/FOOTPRINT/etc)  
Tied Marker CDP Number : (A4)  
Tied Marker DOMES Number : (A9)  
Differential Components from GNSS Marker to the tied monument (ITRS)  
dx (m) :  
dy (m) :  
dz (m) :  
Accuracy (mm) : (mm)  
Survey method : (GPS CAMPAIGN/TRILATERATION/TRIANGULATION/etc)  
Data Measured : (CCYY-MM-DDThh:mmZ)  
Additional Information : (multiple lines)

## 6. Frequency Standard

6.1 Standard Type : INTERNAL  
Input Frequency : 5 MHz  
Effective Dates : (CCYY-MM-DD/CCYY-MM-DD)  
Notes : (multiple lines)

6.2 Standard Type : H-MASER  
Input Frequency : 5 MHz  
Effective Dates : 1998-05-05/CCYY-MM-DD  
Notes : (multiple lines)

6.3 Standard Type : INTERNAL  
Input Frequency : 5 MHz  
Effective Dates : 2000-04-26/CCYY-MM-DD  
Notes : (multiple lines)

6.x Standard Type : (INTERNAL or EXTERNAL H-MASER/CESIUM/etc)  
Input Frequency : (if external)  
Effective Dates : (CCYY-MM-DD/CCYY-MM-DD)  
Notes : (multiple lines)

## 7. Collocation Information

7.1 Instrumentation Type : VLBI  
Status : PERMANENT  
Effective Dates : (CCYY-MM-DD/CCYY-MM-DD)  
Notes : The VLBI telescope routinely participates in  
: IRIS, CORE-A and Syowa experiments)

7.x Instrumentation Type : (GPS/GLONASS/DORIS/PRARE/SLR/VLBI/TIME/etc)  
Status : (PERMANENT/MOBILE)  
Effective Dates : (CCYY-MM-DD/CCYY-MM-DD)  
Notes : (multiple lines)

## 8. Meteorological Instrumentation

8.1.1 Humidity Sensor Model :  
Manufacturer :  
Serial Number :  
Data Sampling Interval :  
Accuracy (% rel h) : (% rel h)  
Aspiration : (UNASPIRATED/NATURAL/FAN/etc)  
Height Diff to Ant : (m)  
Calibration date : (CCYY-MM-DD)  
Effective Dates : CCYY-MM-DD/CCYY-MM-DD  
Notes : (multiple lines)

Institut Géographique National Direction de la Production Service de Géodésie et de Nivellement	Hartebeesthoek Co-location Survey	RT/G 61  Page 29 / 146 Version : 1      Révision : 0 Date   27/06/2005
---	--------------------------------------	--

8.1.x Humidity Sensor Model :

  Manufacturer :  
   Serial Number :  
   Data Sampling Interval : (sec)  
   Accuracy (% rel h) : (% rel h)  
   Aspiration : (UNASPIRATED/NATURAL/FAN/etc)  
   Height Diff to Ant : (m)  
   Calibration date : (CCYY-MM-DD)  
   Effective Dates : (CCYY-MM-DD/CCYY-MM-DD)  
   Notes : (multiple lines)

8.2.1 Pressure Sensor Model :

  Manufacturer :  
   Serial Number :  
   Data Sampling Interval :  
   Accuracy : (mbar)  
   Height Diff to Ant : (m)  
   Calibration date : (CCYY-MM-DD)  
   Effective Dates : CCYY-MM-DD/CCYY-MM-DD  
   Notes : (multiple lines)

8.2.x Pressure Sensor Model :

  Manufacturer :  
   Serial Number :  
   Data Sampling Interval : (sec)  
   Accuracy : (hPa)  
   Height Diff to Ant : (m)  
   Calibration date : (CCYY-MM-DD)  
   Effective Dates : (CCYY-MM-DD/CCYY-MM-DD)  
   Notes : (multiple lines)

8.3.1 Temp. Sensor Model :

  Manufacturer :  
   Serial Number :  
   Data Sampling Interval :  
   Accuracy : (deg C)  
   Aspiration : (UNASPIRATED/NATURAL/FAN/etc)  
   Height Diff to Ant : (m)  
   Calibration date : (CCYY-MM-DD)  
   Effective Dates : CCYY-MM-DD/CCYY-MM-DD  
   Notes : (multiple lines)

8.3.x Temp. Sensor Model :

  Manufacturer :  
   Serial Number :  
   Data Sampling Interval : (sec)  
   Accuracy : (hPa)  
   Aspiration : (UNASPIRATED/NATURAL/FAN/etc)  
   Height Diff to Ant : (m)  
   Calibration date : (CCYY-MM-DD)  
   Effective Dates : (CCYY-MM-DD/CCYY-MM-DD)  
   Notes : (multiple lines)

8.4.1 Water Vapor Radiometer :

  Manufacturer :  
   Serial Number :  
   Distance to Antenna : (m)  
   Height Diff to Ant : (m)  
   Calibration date : (CCYY-MM-DD)  
   Effective Dates : CCYY-MM-DD/CCYY-MM-DD  
   Notes : (multiple lines)

8.4.x Water Vapor Radiometer :

  Manufacturer :  
   Serial Number :  
   Distance to Antenna : (m)  
   Height Diff to Ant : (m)  
   Calibration date : (CCYY-MM-DD)  
   Effective Dates : (CCYY-MM-DD/CCYY-MM-DD)  
   Notes : (multiple lines)

8.5.1 Other Instrumentation : (multiple lines)

8.5.x Other Instrumentation :

Institut Géographique National Direction de la Production Service de Géodésie et de Nivellement	Hartebeesthoek Co-location Survey	RT/G 61 Page 30 / 146 Version : 1      Révision : 0 Date 27/06/2005
---	--------------------------------------	--

9. Local Ongoing Conditions Possibly Affecting Computed Position

9.1.x Radio Interferences : (TV/CELL PHONE ANTENNA/RADAR/etc)  
Observed Degradations : (SN RATIO/DATA GAPS/etc)  
Effective Dates : (CCYY-MM-DD/CCYY-MM-DD)  
Additional Information : (multiple lines)

9.2.x Multipath Sources : (METAL ROOF/DOME/VLBI ANTENNA/etc)  
Effective Dates : (CCYY-MM-DD/CCYY-MM-DD)  
Additional Information : (multiple lines)

9.3.x Signal Obstructions : (TREES/BUILDINGS/etc)  
Effective Dates : (CCYY-MM-DD/CCYY-MM-DD)  
Additional Information : (multiple lines)

10. Local Episodic Effects Possibly Affecting Data Quality

10.x Date : (CCYY-MM-DD/CCYY-MM-DD)  
Event : (TREE CLEARING/CONSTRUCTION/etc)

11. On-Site, Point of Contact Agency Information

Agency : JPL  
Preferred Abbreviation : (A10)  
Mailing Address : 4800 Oak Grove Drive  
: Pasadena, CA 91109 USA

Primary Contact  
Contact Name : David A. Stowers  
Telephone (primary) : 818-354-7055  
Telephone (secondary) :  
Fax : 818-393-4965  
E-mail : dstowers@jpl.nasa.gov

Secondary Contact  
Contact Name : Oivind Ruud/UNAVCO  
Telephone (primary) : 303-497-8030  
Telephone (secondary) : 303-497-8002  
Fax : 303-497-8028  
E-mail : ruud@unavco.ucar.edu

Additional Information : (multiple lines)

12. Responsible Agency (if different from 11.)

Agency : HartRAO  
Preferred Abbreviation : (A10)  
Mailing Address : PO BOX 443  
: Krugersdorp  
: 1740  
: South Africa

Primary Contact  
Contact Name : Ludwig Combrinck  
Telephone (primary) : 27-12-3260742  
Telephone (secondary) :  
Fax : 27-12-3260756  
E-mail : ludwig@hartrao.ac.za

Secondary Contact  
Contact Name : Marisa Nickola  
Telephone (primary) : 27-12-3260742  
Telephone (secondary) :  
Fax :  
E-mail : marisa@hartrao.ac.za

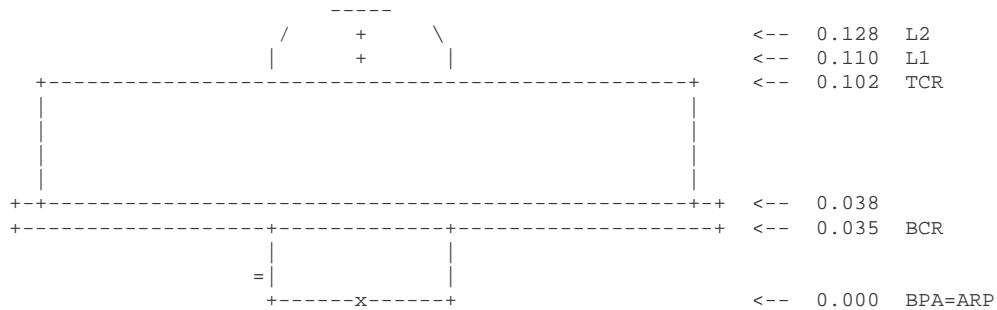

Additional Information : (multiple lines)

### 0. Form

```

Prepared by (full name) : Louis Duquesne
Date Prepared : 2002-05-29
Report Type : UPDATE
If Update:
  Previous Site Log : harb_20000926.log
Modified/Added Sections : 1.0,3.* ,4.* ,5.* ,6.1,11.0,12.0,13.0
  
```

### 1. Site Identification of the GNSS Monument

Site Name	:	Hartebeesthoek
Four Character ID	:	HARB
Monument Inscription	:	NONE
IERS DOMES Number	:	30302M009
CDP Number	:	Not assigned
Monument Description	:	STEEL MAST
Height of the Monument	:	3
Monument Foundation	:	CONCRETE BLOCK
Foundation Depth	:	(m)
Marker Description	:	BRASS NAIL
Date Installed	:	2000-08-09
Geologic Characteristic	:	(BEDROCK/CLAY/CONGLOMERATE/GRAVEL/SAND/etc)
Bedrock Type	:	( IGNEOUS/METAMORPHIC/SEDIMENTARY)
Bedrock Condition	:	(FRESH/JOINTED/WEATHERED)
Fracture Spacing	:	(1-10 cm/10-50 cm/50-200 cm/over 200 cm)
Fault zones nearby	:	(YES/NO/Name of the zone)
Distance/activity	:	(multiple lines)
Additional Information	:	(multiple lines) Station located at the site of the 2-GHz CNES Tracking Station. Monument is a 12mm domed brass mark in a 2m sided, 0.35 m thick concrete slab.

### 2. Site Location Information

City or Town	:	Pretoria
State or Province	:	
Country	:	Republic of South Africa
Tectonic Plate	:	African
Approximate Position (ITRF)		
X coordinate (m)	:	5084658
Y coordinate (m)	:	2670325
Z coordinate (m)	:	-2768481
Latitude (N is +)	:	-255312.84
Longitude (E is +)	:	+0274227.00
Elevation (m, ellips.)	:	1555
Additional Information	:	(multiple lines)

### 3. GNSS Receiver Information

3.1 Receiver Type	:	ROGUE SNR-8000
Satellite System	:	GPS
Serial Number	:	T 367
Firmware Version	:	3.2.32.1
Elevation Cutoff Setting	:	(deg)
Date Installed	:	1997-05-26
Date Removed	:	1999-05-27
Temperature Stabiliz.	:	(none or tolerance in degrees C)
Additional Information	:	(multiple lines)

Institut Géographique National Direction de la Production Service de Géodésie et de Nivellement	Hartebeesthoek Co-location Survey	RT/G 61  Page 33 / 146 Version : 1      Révision : 0 Date 27/06/2005
---	--------------------------------------	--

3.2 Receiver Type : TRIMBLE 4000SSI  
 Satellite System : GPS  
 Serial Number : 3844A24813  
 Firmware Version : 7.29  
 Elevation Cutoff Setting : (deg)  
 Date Installed : 1999-06-01  
 Date Removed : (CCYY-MM-DDThh:mmZ)  
 Temperature Stabiliz. : (none or tolerance in degrees C)  
 Additional Information : (multiple lines)

3.x Receiver Type : (A20, from rcvr\_ant.tab; see instructions)  
 Satellite System : (GPS/GLONASS/GPS+GLONASS)  
 Serial Number : (A5)  
 Firmware Version : (A11)  
 Elevation Cutoff Setting : (deg)  
 Date Installed : (CCYY-MM-DDThh:mmZ)  
 Date Removed : (CCYY-MM-DDThh:mmZ)  
 Temperature Stabiliz. : (none or tolerance in degrees C)  
 Additional Information : (multiple lines)

#### 4. GNSS Antenna Information

4.1 Antenna Type : AOAD/M\_T  
 Serial Number : 153  
 Antenna Reference Point : BPA  
 Marker->ARP Up Ecc. (m) : 9.803  
 Marker->ARP North Ecc(m) : 000.0000  
 Marker->ARP East Ecc(m) : 000.0000  
 Alignment from True N :  
 Antenna Radome Type :  
 Radome Serial Number :  
 Antenna Cable Type : (vendor & type number)  
 Antenna Cable Length : (m)  
 Date Installed : 1997-05-26  
 Date Removed : 1999-05-27  
 Additional Information : (multiple lines)

4.2 Antenna Type : TRM29659.00  
 Serial Number : 0220136820  
 Antenna Reference Point : BPA  
 Marker->ARP Up Ecc. (m) : 9.803  
 Marker->ARP North Ecc(m) : 000.0000  
 Marker->ARP East Ecc(m) : 000.0000  
 Alignment from True N :  
 Antenna Radome Type :  
 Radome Serial Number :  
 Antenna Cable Type : (vendor & type number)  
 Antenna Cable Length : (m)  
 Date Installed : 1999-06-01  
 Date Removed : 2000-08-10  
 Additional Information :

4.3 Antenna Type : TRM29659.00  
 Serial Number : 0220136820  
 Antenna Reference Point : BPA  
 Marker->ARP Up Ecc. (m) : 3.052  
 Marker->ARP North Ecc(m) : 000.0000  
 Marker->ARP East Ecc(m) : 000.0000  
 Alignment from True N :  
 Antenna Radome Type : NONE  
 Radome Serial Number :  
 Antenna Cable Type : (vendor & type number)  
 Antenna Cable Length : (m)  
 Date Installed : 2000-08-11T10:00Z  
 Date Removed : (CCYY-MM-DDThh:mmZ)  
 Additional Information : Antenna support is a 3m triangular metal support

4.x Antenna Type : (A20, from rcvr\_ant.tab; see instructions)  
 Serial Number : (A\*, but note the first A5 is used in SINEX)  
 Antenna Reference Point : (BPA/BCR/XXX from "antenna.gra"; see instr.)  
 Marker->ARP Up Ecc. (m) : (F8.4)  
 Marker->ARP North Ecc(m) : (F8.4)  
 Marker->ARP East Ecc(m) : (F8.4)

Institut Géographique National Direction de la Production Service de Géodésie et de Nivellement	Hartebeesthoek Co-location Survey	RT/G 61 Page 34 / 146 Version : 1      Révision : 0 Date 27/06/2005
---	--------------------------------------	--

Alignment from True N : (deg; + is clockwise/east)  
 Antenna Radome Type : (A4 from rcvr\_ant.tab; see instructions)  
 Radome Serial Number :  
 Antenna Cable Type : (vendor & type number)  
 Antenna Cable Length : (m)  
 Date Installed : (CCYY-MM-DDThh:mmZ)  
 Date Removed : (CCYY-MM-DDThh:mmZ)  
 Additional Information : (multiple lines)

## 5. Surveyed Local Ties

5.1 Tied Marker Name : IGS monument HRAO  
 Tied Marker Usage : (SLR/VLBI/LOCAL CONTROL/FOOTPRINT/etc)  
 Tied Marker CDP Number :  
 Tied Marker DOMES Number : 30302M004  
 Differential Components from GNSS Marker to the tied monument (ITRS)  
 dx (m) : 694.842  
 dy (m) : -1929.285  
 dz (m) : -250.384  
 Accuracy (mm) : 2  
 Survey method : GPS CAMPAIGN  
 Date Measured : 2000-08-09  
 Additional Information : Survey by IGN-France

5.2 Tied Marker Name : DORIS antenna HBKB  
 Tied Marker Usage : (SLR/VLBI/LOCAL CONTROL/FOOTPRINT/etc)  
 Tied Marker CDP Number :  
 Tied Marker DOMES Number : 30302S006  
 Differential Components from GNSS Marker to the tied monument (ITRS)  
 dx (m) : -4.327  
 dy (m) : 22.214  
 dz (m) : 10.332  
 Accuracy (mm) : 1  
 Survey method : GPS CAMPAIGN  
 Date Measured : 2000-08-09  
 Additional Information : Survey by IGN-France

5.3 Tied Marker Name : IGS monument HARK (former location of the GPS  
 Tied Marker Usage : (SLR/VLBI/LOCAL CONTROL/FOOTPRINT/etc)  
 Tied Marker CDP Number :  
 Tied Marker DOMES Number : 30302M007  
 Differential Components from GNSS Marker to the tied monument (ITRS)  
 dx (m) : -32.350  
 dy (m) : 41.266  
 dz (m) : -13.245  
 Accuracy (mm) : 1  
 Survey method : GPS CAMPAIGN  
 Date Measured : 2000-08-09  
 Additional Information : Survey by IGN-France

5.x Tied Marker Name :  
 Tied Marker Usage : (SLR/VLBI/LOCAL CONTROL/FOOTPRINT/etc)  
 Tied Marker CDP Number : (A4)  
 Tied Marker DOMES Number : (A9)  
 Differential Components from GNSS Marker to the tied monument (ITRS)  
 dx (m) :  
 dy (m) :  
 dz (m) :  
 Accuracy (mm) : (mm)  
 Survey method : (GPS CAMPAIGN/TRILATERATION/TRIANGULATION/etc)  
 Date Measured : (CCYY-MM-DDThh:mmZ)  
 Additional Information : (multiple lines)

## 6. Frequency Standard

6.1 Standard Type : EXTERNAL CESIUM  
 Input Frequency : 5MHz  
 Effective Dates : 1999-11-23/CCYY-MM-DD  
 Notes : (multiple lines)

Institut Géographique National Direction de la Production Service de Géodésie et de Nivellement	Hartebeesthoek Co-location Survey	RT/G 61  Page 35 / 146 Version : 1      Révision : 0 Date 27/06/2005
---	--------------------------------------	--

6.x Standard Type : (INTERNAL or EXTERNAL H-MASER/CESIUM/etc)  
 Input Frequency : (if external)  
 Effective Dates : (CCYY-MM-DD/CCYY-MM-DD)  
 Notes : (multiple lines)

#### 7. Collocation Information

7.1 Instrumentation Type : DORIS  
 Status : PERMANENT  
 Effective Dates : 2000-08-10/CCYY-MM-DD  
 Notes : DORIS antenna HBKB

7.2 Instrumentation Type : VLBI  
 Status : PERMANENT  
 Effective Dates : (CCYY-MM-DD/CCYY-MM-DD)  
 Notes : (multiple lines)

7.x Instrumentation Type : (GPS/GLONASS/DORIS/PRARE/SLR/VLBI/TIME/etc)  
 Status : (PERMANENT/MOBILE)  
 Effective Dates : (CCYY-MM-DD/CCYY-MM-DD)  
 Notes : (multiple lines)

#### 8. Meteorological Instrumentation

8.1.1 Humidity Sensor Model :  
 Manufacturer :  
 Serial Number :  
 Data Sampling Interval :  
 Accuracy (% rel h) : (% rel h)  
 Aspiration : (UNASPIRATED/NATURAL/FAN/etc)  
 Height Diff to Ant : (m)  
 Calibration date : (CCYY-MM-DD)  
 Effective Dates : CCYY-MM-DD/CCYY-MM-DD  
 Notes : (multiple lines)

8.1.x Humidity Sensor Model :  
 Manufacturer :  
 Serial Number :  
 Data Sampling Interval : (sec)  
 Accuracy (% rel h) : (% rel h)  
 Aspiration : (UNASPIRATED/NATURAL/FAN/etc)  
 Height Diff to Ant : (m)  
 Calibration date : (CCYY-MM-DD)  
 Effective Dates : (CCYY-MM-DD/CCYY-MM-DD)  
 Notes : (multiple lines)

8.2.1 Pressure Sensor Model :  
 Manufacturer :  
 Serial Number :  
 Data Sampling Interval :  
 Accuracy : (mbar)  
 Height Diff to Ant : (m)  
 Calibration date : (CCYY-MM-DD)  
 Effective Dates : CCYY-MM-DD/CCYY-MM-DD  
 Notes : (multiple lines)

8.2.x Pressure Sensor Model :  
 Manufacturer :  
 Serial Number :  
 Data Sampling Interval : (sec)  
 Accuracy : (hPa)  
 Height Diff to Ant : (m)  
 Calibration date : (CCYY-MM-DD)  
 Effective Dates : (CCYY-MM-DD/CCYY-MM-DD)  
 Notes : (multiple lines)

8.3.1 Temp. Sensor Model :  
 Manufacturer :  
 Serial Number :  
 Data Sampling Interval :  
 Accuracy : (deg C)  
 Aspiration : (UNASPIRATED/NATURAL/FAN/etc)  
 Height Diff to Ant : (m)

### 5.3. SLR site log

ILRS Site and System Information Form  
 International Laser Ranging Service

#### 0. Form

Prepared by (Full Name) : BERNHARDT Johan  
 Preparer E-mail : johan@hartrao.ac.za  
 Date Prepared : 2004-08-26  
 Report Type : UPDATED (2004-08-26)  
 Format Version : 1.0

#### 1. Identification of the Ranging System Reference Point (SRP)

Site Name : Hartebeeshoek Radio Astronomy Observatory  
 IERS DOMES Number : 30302M003  
 CDP Pad ID : 7501  
 Subnetwork : NASA  
 Description : MONUMENT  
 Monument Description : PILLAR  
 Monument Inscription : None  
 Mark Description : Bullseye  
 Date Installed : 1993-07-12  
 Date Removed : (yyyy-mm-dd)  
 Geologic Characteristic : Andersite  
 Additional Information : monument is a brass marker with a stainless steel plate around the marker

#### 2. Site Location Information

City or Town : Johannesburg  
 State or Province : Gauteng  
 Country : South Africa  
 Tectonic Plate : African  
 Approximate Position  
 X coordinate [m] : 5085401.135  
 Y coordinate [m] : 2668330.108  
 Z coordinate [m] : -2768688.865  
 Latitude [deg] : 25.8897 S  
 Longitude [deg] : 27.6861 E  
 Elevation [m] : 1406.822  
 Additional Information : (multiple lines)

#### 3. General System Information

3.01 System Name : Moblas-6  
 4-Character Code : HARL  
 CDP System Number : 06  
 CDP Occupation Number : 02  
 Eccentricity to SRP (if Not Identical With SRP)  
 North [m] : -0.003 + 0.001  
 East [m] : -0.006 + 0.001  
 Up [m] : 3.228 + 0.001  
 Date Measured : 2000-08-07  
 Date Installed : 2000-06-09  
 Date Removed : (yyyy-mm-dd)  
 Additional Information : Previously occupied by MTLRS

#### 4. Telescope Information

4.01 Receiving Telescope Type : Cassegrain  
 Aperture [m] : 0.762  
 Mount : AZ-EL  
 Transmitting Telescope Type : Refractor  
 Aperture [m] : 0.163  
 Tracking Camera Type : NONE  
 Model :  
 Manufacturer :  
 Field of View [deg] :  
 Minimum Magnitude [mag] :

Institut Géographique National Direction de la Production Service de Géodésie et de Nivellement	Hartebeesthoek Co-location Survey	RT/G 61 Page 39 / 146 Version : 1      Révision : 0 Date 27/06/2005
---	--------------------------------------	--

Transmit/Receive Path : SEPARATE  
Transmit/Receive Switch : NONE  
Max Slew Rate Az [deg/s]: 20  
Max Slew Rate El [deg/s]: 5  
Max Used Tracking Rate Az : 5  
Max Used Tracking Rate El : 3  
Telescope Shelter : ROLL-BACK ROOF  
Daylight Filter Type : Omega optical 532NB1 9114  
Dayl. Filt. Bandwidth [nm]: 100  
Adjustable Attenuation : RECEIVE  
Transmit Efficiency : 0.94  
Receive Efficiency : 0.76  
Date Installed : 2000-06-09  
Date Removed : (yyyy-mm-dd)  
Additional Information : (multiple lines)

## 5. Laser System Information

5.01 Laser Type : ND:YAG  
Number of Amplifiers : 1  
Primary Wavelength [nm]: 1064nm  
Primary Maximum Energy [mJ]: 200  
Secondary Wavelength [nm]: 532.1  
Secondary Max. Energy [mJ]: 100  
Xmit Energy Adjustable : YES  
Pulse Width (FWHM) [ps]: 200  
Max. Repetition Rate [Hz]: 5  
Fullw. Beam Divergence ["]: 30  
Final Beam Diameter [m]: 0.093  
Eyesafe : NO  
Eyesafe Standard : ANSI 136.1  
Date Installed : 2000-06-09  
Date Removed : (yyyy-mm-dd)  
Additional Information : laser repetition rate is 10 Hz,  
but the time interval counter  
restricts the maximum rate to 5 Hz

## 6. Receiver System

### 6.01.01 Primary Chain

Wavelength [nm]: 532  
Detector Type : PMT  
Manufacturer : Photek  
Model : PMT-318  
Quantum Efficiency [%]: 13%  
Nominal Gain : 1E  
Rise Time [ps]: 350  
Jitter (Single PE)[ps]: 100  
Field of View ["]: 360  
Date Installed : 2003-07-24  
Date Removed : (yyy-mm-dd)  
Signal Processing : CFD  
Manufacturer : Tennelec  
Model : TC454  
Date Installed : 2000-06-09  
Date Removed : (yyyy-mm-dd)  
Amplitude Measurement : Yes  
Return-rate Controlled: Yes  
Mode of Operation : Few to Multi Photons  
Time of Flight Observ. : INTERNAL  
Manufacturer : Hewlett-Packard  
Model : 5370B  
Resolution [ps]: 20  
Precision [ps]: 35  
Date Installed : 2000-06-09  
Date Removed : (yyyy-mm-dd)  
Additional Information : (multiple lines)

### 6.02.01 Secondary Chain

Wavelength [nm]: 532  
Detector Type : MCP  
Manufacturer : ITT  
Model : F4129F  
Quantum Efficiency [%]: 17.7  
Nominal Gain : 1E  
Rise Time [ps]: 350

Institut Géographique National Direction de la Production Service de Géodésie et de Nivellement	Hartebeesthoek Co-location Survey	RT/G 61 Page 40 / 146 Version : 1      Révision : 0 Date 27/06/2005
---	--------------------------------------	--

Jitter (Single PE)[ps]: 100  
Field of View [ "]: 360  
Date Installed : 2000-06-09  
Date Removed : 2003-07-24  
Signal Processing : CFD  
Manufacturer : Tennelec  
Model : TC454  
Date Installed : 2000-06-09  
Date Removed : (yyyy-mm-dd)  
Amplitude Measurement : yes  
Return-rate Controlled: yes  
Mode of Operation : Few to Multi Photons  
Time of Flight Observ. : INTERVAL  
Manufacturer : Hewlett-Packard  
Model : 5370B  
Resolution [ps]: 20  
Precision [ps]: 35  
Date Installed : 2000-06-09  
Date Removed : (yyyy-mm-dd)  
Additional Information : (multiple lines)

6.03.01 Secondary Chain  
Wavelength [nm]: 532  
Detector Type : MCP  
Manufacturer : ITT  
Model : F4129F  
Quantum Efficiency [%]: 17.7  
Nominal Gain : 1E6  
Rise Time [ps]: 350  
Jitter (Single PE)[ps]: 100  
Field of View [ "]: 360  
Date Installed : 1986-03-31  
Date Removed : (yyyy-mm-dd)  
Signal Processing : CFD  
Manufacturer : Tennelec  
Model : TC454  
Date Installed : 2000-06-09  
Date Removed : (yyyy-mm-dd)  
Amplitude Measurement : YES  
Return-rate Controlled: YES  
Mode of Operation : Single to Multi Photons  
Time of Flight Observ. : INTERVAL  
Manufacturer : Hewlett-Packard  
Model : 5370B  
Resolution [ps]: 20  
Precision [ps]: 35  
Date Installed : 2000-06-09  
Date Removed : (yyyy-mm-dd)  
Additional Information : High sensitivity laser receiver configuration.  
Everything is the same as the primary chain  
except the discriminator threshold has been  
lowered to accept single photons and the  
signal is amplified with 24 dB of gain

## 7. Tracking Capabilities

7.01 Satellites  
Very Low Alt (<400 km) : YES  
Low Altitude (400-2000) : YES  
Lageos : YES  
GLONASS : YES  
Etalon : NIGHT  
GPS : NIGHT  
Moon : NO  
Avge Pass Switch Time [s]: 60  
Average values for Lageos  
Single Shot RMS [mm]: 10  
# of Obs per NP : 200  
Use of Semi-trains : NO  
# of Semi-train Tracks : N.A.  
Range Gate Width [ns]: 2000  
Beam Pointing Accuracy [ "]: 0.6  
Angle Encoder Resolution["]: 0.6  
Min. Tracking Elev. [deg]: 20  
Operation

Institut Géographique National Direction de la Production Service de Géodésie et de Nivellement	Hartebeesthoek Co-location Survey	RT/G 61 Page 41 / 146 Version : 1      Révision : 0 Date 27/06/2005
---	--------------------------------------	--

Months per Year : 12  
Days per Week : 7  
Hours per Day : 16  
Staff per Shift : one  
System Shared With : none  
Time Allocated to SLR [%] : 100  
Remotely Controllable : NO  
Date First Applicable : 2000-06-09  
Date Last Applicable : (yyyy-mm-dd)  
Additional Information : On 2002-06-09 went from 5 days a week to 7 days a week operation. Staff per shift was reduced from 2 to 1 at this time.

#### 8. Calibration

8.01 Calibration Type : PRE□  
Target Location : EXTERNAL  
Target Type : CORNER CUBE  
Target Structure : CONCRETE PIER  
Target Distance [m] : 198  
Date Measured : 2000-08-07  
Accuracy (mm) [mm] : 2  
Verification : multi-target ranging  
Return-rate Controlled : NO  
Mode of Operation : MULTI  
Average Cal Interval [min] : 5  
Single Shot RMS [mm] : 5  
Edit Criterion 1st Chain : ITERATIVE 3 SIGMA  
Edit Criterion 2nd Chain : N.A.  
Application of Cal Data : AVERAGE  
Date Installed : (yyyy-mm-dd)  
Date Removed : (yyyy-mm-dd)  
Additional Information : (multiple lines)

#### 9. Time and Frequency Standards

9.01.01 Frequency Standard Type : Rubidium disciplined by GPS  
Model : XL-DC 151-358-108-2  
Manufacturer : TrueTime  
Short Term Stab. [e-12] : 10  
Long Term Stab. [e-12] : 3  
Time Reference : GPS  
Synchronization : GPS  
Epoch Accuracy [ns] : <100  
Date Installed : 2000-06-09  
Date Removed : (yyyy-mm-dd)  
Additional Information : This Truetime model contains the Stanford PRS10 Rubidium Frequency Standard

9.02.01 GPS Timing Rcvr Model : XL-DC 151-358-108-2  
Manufacturer : TrueTime  
Date Installed : 2000-06-09  
Date Removed : (yyyy-mm-dd)  
Additional Information : CNS clock used for comparisons

#### 10. Preprocessing Information

10.01 On-site NP Generation : NO  
Data Screening : IRV□□□  
Edit Criterion 1st Chain : ITERATIVE 3.0 SIGMA  
Edit Criterion 2nd Chain : N.A.  
Upload interval : HOURLY  
Date First Applicable : 2000-06-09  
Date Last Applicable : 2002-06-19  
Additional Information : (multiple lines)

10.02 On-site NP Generation : YES  
Data Screening : IRV□□□  
Edit Criterion 1st Chain : ITERATIVE 3.0 SIGMA  
Edit Criterion 2nd Chain : N.A.  
Upload interval : HOURLY  
Date First Applicable : 2002-06-19

Institut Géographique National Direction de la Production Service de Géodésie et de Nivellement	Hartebeesthoek Co-location Survey	RT/G 61 Page 42 / 146 Version : 1      Révision : 0 Date 27/06/2005
---	--------------------------------------	--

Date Last Applicable : (yyyy-mm-dd)  
Additional Information : Generic Normal Point Processing System 2.0 installed 2002-06-19 at 06:30 UT

#### 11. Aircraft Detection

11.01 Detection Type : RADAR  
Date Installed : 2002-06-09  
Date Removed : (yyyy-mm-dd)  
Additional Information : (multiple lines)

#### 12. Meteorological Instrumentation

12.01.01 Pressure Sensor Model : MET3  
Manufacturer : Paroscientific  
Recording Interval : PER PULSE  
Accuracy [mbar] : 0.1  
Height Diff to SRP [m] : 4  
Date Installed : 2000-06-09  
Calibration Interval : YEARLY  
Date Removed : (yyyy-mm-dd hh:mm UT)  
Additional Information : MET3 package replaced on 2002-06-13. Barometric data taken between 2002-05-13 and 2002-06-12 is suspect.

12.02.01 Temp Sensor Model : MET3  
Manufacturer : Paroscientific  
Recording Interval : PER PULSE  
Accuracy [deg C] : 0.5  
Date Installed : 2000-06-09  
Calibration Interval : YEARLY  
Date Removed : (yyyy-mm-dd hh:mm UT)  
Additional Information : (multiple lines)

12.03.01 Humidity Sensor Model : MET3  
Manufacturer : Paroscientific  
Recording Interval : PER PASS  
Accuracy [% rel h] : 2  
Date Installed : 2000-06-09  
Calibration Interval : YEARLY  
Date Removed : (yyyy-mm-dd hh:mm UT)  
Additional Information : (multiple lines)

#### 13. Local Ties, Eccentricities, and Collocation Information

##### 13.01 Collocated Permanent Geodetic Systems

GPS : IGS  
Date Installed : 1996-09-05  
Date Removed : (yyyy-mm-dd)

### 13.02.01 Local Ties from the SRP to Other Monuments or Systems on Site

Monument Name	: HRAO
Instrumentation Type	: GPS
Instrumentation Status	: PERMANENT
DOMES Number	: 30302M004
CDP Number	: (XXXX)
Differential Components (ITRS)	
dx	[m]: -48.556 + 0.0018
dy	[m]: 65.627 + 0.0013
dz	[m]: -42.851 + 0.0012
Date Measured	: (yyyy-mm-dd)
Determined by	: Ludwig Combrinck
Date Installed	: 1999-09-05
Date Removed	: (yyyy-mm-dd)
Additional Information	: (multiple lines)

Institut Géographique National Direction de la Production Service de Géodésie et de Nivellement	Hartebeesthoek Co-location Survey	RT/G 61 Page 44 / 146 Version : 1      Révision : 0 Date 27/06/2005
---	--------------------------------------	--

13.03.01 Eccentricities Between Other Monuments on Site

From: Monument Name : HRAO  
DOMES Number : 30302M004  
CDP Number : (XXXX)  
To: Monument Name : 7232  
DOMES Number : 30302S001  
CDP Number : 7232  
Differential Components (ITRS)  
dx [m]: 90.236 + 0.0158  
dy [m]: -132.190 + 0.075  
dz [m]: 34.704 + 0.039  
Date Measured : 1999-06-01  
Determined by : Ludwig Combrinck  
Additional Information : Previous site log had the wrong sign for dz and also the wrong To: monument

13.03.02 Eccentricities Between Other Monuments on Site

From: Monument Name : HARL  
DOMES Number : 30302M003  
CDP Number : 7501  
To: Monument Name : VLBI  
DOMES Number : 30302S001  
CDP Number : 7232  
Differential Components (ITRS)  
dx [m]: 41.680 + 0.0158  
dy [m]: -66.564 + 0.075  
dz [m]: -8.131 + 0.039  
Date Measured : 1996-06-01  
Determined by : Ludwig Combrinck  
Additional Information : (multiple lines)

---	--------------------------------------	---

#### 5.4. SLR observations description

The translation stage has been put on top of the SLR and is centered on the vertical rotation axis of the SLR and could be used with target or tacheometre.

Target and translation stage centered on the telescope vertical axis to find the eccentricity of the SLR (IGN method). This point has been included into the levelling observations.

Translation stage ...

...and invar rod for levelling

## 5.5. DORIS site log

HARTEBEESTHOEK DORIS site description form

0. Form

Prepared by : SIMB (DORIS installation and maintenance department)  
 Date prepared : 6/05/2004  
 Report type : UPDATE

1. Site location information

Site name : HARTEBEESTHOEK  
 Site DOMES number : 30302  
 Host agency : Satellite Application Centre  
 City : Hartebeesthoek  
 State or province : Pretoria  
 Country : SOUTH AFRICA  
 Tectonic plate : AFRC  
 Geological information :

Geographical coordinates (ITRF) :

North Latitude : -25 deg 53' 13''  
 East Longitude : 27 deg 42' 27''  
 Ellipsoid height : 1559 m  
 Approximate altitude : 1556 m

2. DORIS antenna and reference point information

2.1

Four character ID : HBKA  
 Antenna model : Alcatel  
 Antenna serial number : 24  
 IERS DOMES number : 30302S202  
 CNES/IGN number : 303021  
 CTDP number : 19  
 Date installed (dd/mm/yy) : 10/03/1988  
 Date removed (dd/mm/yy) : 23/05/1997  
 Antenna support type : 3 meters pylon not guyed  
 Installed on : Embedded on the side face of a pillar support of a one storied building.  
 Height above ground mark : 6.970 m  
 Ground mark type : Target glued on concrete floor.  
 Ground mark DOMES number : 30302M005  
 Notes :

2.2

Four character ID : HBLA  
 Antenna model : Alcatel  
 Antenna serial number : 24  
 IERS DOMES number : 30302S005  
 CNES/IGN number : 303022  
 CTDP number : 76  
 Date installed (dd/mm/yy) : 30/05/1997  
 Date removed (dd/mm/yy) : 08/08/2000  
 Antenna support type : 3.5 m tower not guyed  
 Installed on : Embedded on the side face of a pillar support of a one storied building.  
 Height above ground mark : ? m  
 Ground mark type : Domed brass mark  
 Ground mark DOMES number : 30302M006  
 Notes :

2.3

Four character ID : HBKB  
 Antenna model : Starec 52291 type  
 Antenna serial number : 60  
 IERS DOMES number : 30302S006  
 CNES/IGN number : 303023  
 CTDP number : 95  
 Date installed (dd/mm/yy) : 09/08/2000  
 Date removed (dd/mm/yy) :  
 Antenna support type : 2 meter tubular mast 0.15 m diameter  
 Installed on : Metallic mast fixed 4 meters deep in ground. 3 m soil ground and 1 m rock ground. Mast filled with concrete.

Institut Géographique National Direction de la Production Service de Géodésie et de Nivellement	Hartebeesthoek Co-location Survey	RT/G 61  Page 48 / 146 Version : 1      Révision : 0 Date 27/06/2005
---	--------------------------------------	--

Height above ground mark : m  
 Ground mark type : Mark on top of the mast.  
 Ground mark DOMES number : 30302  
 Notes :

### 3. DORIS beacons information

#### 3.1

Beacon serial number : 86 27 019  
 Beacon model : 1.0  
 USO serial number : 1.539  
 4 Char. ID of the REF point : HBKA  
 Date installed (dd/mm/yy) : 01/04/1988  
 Date removed (dd/mm/yy) : 04/09/1996

#### 3.2

Beacon serial number : 86 27 005  
 Beacon model : 1.0  
 USO serial number : 3.116  
 4 Char. ID of the REF point : HBKA  
 Date installed (dd/mm/yy) : 04/09/1996  
 Date removed (dd/mm/yy) : 26/05/1997

#### 3.3

Beacon serial number : 86 27 005  
 Beacon model : 1.0  
 USO serial number : 3.116  
 4 Char. ID of the REF point : HBLA  
 Date installed (dd/mm/yy) : 30/05/1997  
 Date removed (dd/mm/yy) : 09/08/2000

#### 3.4

Beacon serial number : 86 27 005  
 Beacon model : 1.0  
 USO serial number : 3.116  
 4 Char. ID of the REF point : HBKB  
 Date installed (dd/mm/yy) : 11/08/2000  
 Date removed (dd/mm/yy) :

### 4. ITRF coordinates and velocities of the current DORIS ref. point (HBKB)

Solution : ITRF2000 (connection with the IGS station HARK)  
 Epoch : 1997.0  
 X = 5084653.326 m      Y = 2670347.176 m      Z = -2768470.965 m  
 Sig X = 0.003 m      Sig Y = 0.002 m      Sig Z = 0.002 m  
 VX = -0.0012 m/y      VY = 0.0198 m/y      VZ = 0.0159 m/y  
 Sig VX = 0.0005 m/y      Sig VY = 0.0003 m/y      Sig VZ = 0.0004 m/y

### 5. IERS colocation information

#### 5.1

Instrument type : GPS  
 Status : Permanent  
 DOMES number of the instrument ref. point : 30302M009  
 Notes :

#### 5.2

Instrument type : VLBI  
 Status : Permanent  
 DOMES number of the instrument ref. point : 30302S001  
 Notes :

### 6. Tide Gauge colocation information

### 7. Local site ties

#### 7.1

Point description : DORIS Alcatel antenna reference point (HBLA)  
 DOMES number : 30302S005  
 Differential components from the current DORIS ref. point (HBKB)  
 to the above point (in the ITRS) :  
   dX (m) : -11.833  
   dY (m) : 2.762  
   dZ (m) : -26.889  
 Accuracy (m) : 0.002  
 Date measured : August 2000  
 Additional information : Survey by IGN-F

#### 7.2

Institut Géographique National Direction de la Production Service de Géodésie et de Nivellement	Hartebeesthoek Co-location Survey	RT/G 61 Page 49 / 146 Version : 1      Révision : 0 Date 27/06/2005
---	--------------------------------------	--

Point description : HARK IGS station  
DOMES number : 30302M007  
Differential components from the current DORIS ref. point (HBKB)  
to the above point (in the ITRS) :  
dX (m) : -28.023  
dY (m) : 19.052  
dZ (m) : -23.577  
Accuracy (m) : 0.001  
Date measured : August 2000  
Additional information : Survey by IGN-F

#### 7.3

Point description : HARB IGS station  
DOMES number : 30302M009  
Differential components from the current DORIS ref. point (HBKB)  
to the above point (in the ITRS) :  
dX (m) : 4.327  
dY (m) : -22.214  
dZ (m) : -10.332  
Accuracy (m) : 0.001  
Date measured : August 2000  
Additional information : Survey by IGN-F

#### 7.4

Point description : DORIS Alcatel antenna reference point (HBKA)  
DOMES number : 30302S202  
Differential components from the current DORIS ref. point (HBKB)  
to the above point (in the ITRS) :  
dX (m) : -11.790  
dY (m) : 2.543  
dZ (m) : -26.195  
Accuracy (m) : 0.02  
Date measured :  
Additional information :

### 8. Meteorological Instrumentation

#### 8.1 Humidity sensor

Model : MUC.1 + transmitter M-UTN3  
Manufacturer : SPSI  
Accuracy :  
Notes :

#### 8.2 Pressure sensor

Model : M-PaTN.8  
Manufacturer : SPSI  
Accuracy :  
Height : m above the current DORIS ref. point (HBKB)  
Notes :

#### 8.3 Temperature sensor

Model : Constructed for DORIS beacons  
Manufacturer : CEIS-TM  
Accuracy :  
Notes :

### 9. DORIS network contacts

Primary contact:  
Name : Herve FAGARD  
Agency : Institut Geographique National  
Mailing address : Service de Geodesie et de Nivellement

## 5.6. VLBI station logsheet

Network Station Configuration File  
International VLBI Service

Refer to the instructions in the file  
<ftp://ivscc.gsfc.nasa.gov/config/instructions.txt>  
for how to fill out and submit this form.  
990624 nrv Form version 0.5  
990702 nrv Form version 0.6

990713 nrv Form version 0.7  
991020 nrv Form version 0.8

### 0. Form

Prepared by (full name) : Ludwig Combrinck  
Date prepared : 2000-MAY-15  
Report type : new

### 1. Site identification

Site name : Hartebeesthoek Radio Astronomy Observatory  
Site 8-letter code : HARTRAO  
Site 2-letter code(s) : Hh  
IERS DOMES number : 30302S001  
CDP occupation code :  
CDP monument number : 7232  
Surveyed into national network? : yes  
IGS station code : HRAO  
ILRS station name :  
Additional information : MOBLAS6 will be collocated during 2000

### 2. Site information

#### 2.1 Site location information

City or Town : Krugersdorp  
State or Province : Gauteng  
Country : South Africa  
Tectonic plate : African  
Approximate position  
X coordinate (m) : 5085442.780  
Y coordinate (m) : 2668263.483  
Z coordinate (m) : -2768697.034  
Latitude (deg) : -25.88975199 S  
Longitude (deg) : 27.68539261 E  
Elevation (m) : 1415  
Source of position : ITRF  
Additional information : Elevation is above WGS84 ellipsoid

#### 2.2 Site local survey network information

Number of reference markers : 12  
Type of marker : pillar  
Frequency of surveying : annual  
Surveying method : GPS  
Survey instruments used : GPS  
Accuracy : 3 mm  
Survey performed by : Ludwig Combrinck  
Survey documentation : report  
Most recent survey date : 2000-mar-10  
Results provided to IERS: yes  
Results provided to CDDIS: no  
Person responsible : Ludwig Combrinck  
Additional information :

#### 2.3 Site descriptive information

Electronic file available at IVSCC:  
(Please upload these files to <ftp://ivscc.gsfc.nasa.gov/incoming>  
and send e-mail to [ivscc@ivscc.gsfc.nasa.gov](mailto:ivscc@ivscc.gsfc.nasa.gov) telling the names.)

Institut Géographique National Direction de la Production Service de Géodésie et de Nivellement	Hartebeesthoek Co-location Survey	RT/G 61 Page 51 / 146 Version : 1      Révision : 0 Date 27/06/2005
---	--------------------------------------	--

ns is for Network Stations (don't change)  
Xy is station 2-letter code  
sm, sd, hm, md, sp indicate the type of file (don't change)  
NN are numbers, 01 is the first such file, 02 the second, etc.  
.type is the file type, .ps for PostScript, .jpg for JPEG, etc.  
Site map : nsXysmNN.type  
Site diagram : nsXysmNN.type  
Horizon mask diagram : nsXysmNN.type  
Monument description : nsXysmNN.type  
Site photographs : nsXysmNN.type  
URLs for reference  
Site map :  
Site diagram :  
Horizon mask :  
Monument description :  
Site photographs :  
Additional information :

### 3. Antenna information

Diameter (m) : 26  
Axis type : HADC  
Axis offset (m) : 6.6956 + 2.3 mm  
Slew rate first axis : 0.5 deg/sec  
Slew rate second axis : 0.5 deg/sec  
Limit stops first axis : -88,  
Limit stops second axis : -88,  
Horizon mask data : (Pairs of values separated with /.  
Either line segment end points:  
Az1 El1/Az2 El2/..../Azlast Ellast  
or step function:  
Az1 El1/Az2 El2/..../Azlast )  
Occupation dates : (yyyy-mmm-dd to yyyy-mmm-dd)  
Additional information : (multiple lines allowed)

### 4. Receiver information

Feed location : cassegrain focus  
Feed type : dichroic  
X 1st-stage amplifier : cooled HEMT  
X bandwidth (MHz) : 800  
X Tsys at zenith (K) : 40  
X SEFD (Jy) :  
X aperture efficiency : (optional)  
X LO frequencies (MHz) : 8080  
S 1st-stage amplifier : cooled HEMT  
S bandwidth (MHz) : 240  
S Tsys at zenith (K) : 50  
S SEFD (Jy) :  
S aperture efficiency : (optional)  
S LO frequencies (MHz) : 2020  
Phase calibrator type : NASA/CDP with 5 MHz input  
Additional information : (multiple lines allowed)

### 5. Cables between receiver and back end

Length of cable run : (between front end and back end, meters)  
X band cable type : (e.g. RG214, optical fiber, etc.)  
X band freq. bandpass : (MHz)  
S band cable type : (e.g. RG214, optical fiber, etc.)  
S band freq. bandpass : (MHz)  
LO ref signal cable type: (e.g. RG214, optical fiber, etc.)  
LO ref signal freq. : (MHz)  
Phase cal ref signal cable type: (e.g. RG214, optical fiber, etc.)  
Phase cal ref signal freq. : (MHz)  
Cable meas. system type : MarkIII cable cal  
Additional information : (multiple lines allowed, e.g. multiple  
signals multiplexed on a single cable)

### 6. Data acquisition system information

6.1 Video/baseband converter set (group each set of up to 16  
mixers with similar characteristics)  
Type of converters : MarkIV, K4-1  
Number of mixers : MarkIV type has 1 mixer per converter,  
Sidebands available : U&L

<p>Institut Géographique National Direction de la Production Service de Géodésie et de Nivellement</p>	<p>Hartebeesthoek Co-location Survey</p>	<p>RT/G 61 Page 52 / 146 Version : 1 Révision : 0 Date 27/06/2005</p>
--	--	---

Number of mixers with  
the following filters in  
all sideband outputs:

2 MHz	:	15
4 MHz	:	15
8 MHz	:	15
16 MHz	:	15
32 MHz	:	15

Additional information : (multiple lines allowed)

6.1.x (add sections for each additional video/baseband converter set)

#### 6.2 Formatter

Formatter type	:	MarkIV, S2
Serial number or rack ID:	SN 007	
Additional information	:	(multiple lines allowed)

6.2.x (add sections for each additional formatter)

#### 6.3 Decoder

Decode type	:	MarkIII, S2
Additional information	:	(multiple lines allowed)

6.3.x (add sections for each additional decoder)

#### 6.4 IF distribution

IF distributor type	:	MarkIII/IV
Additional information	:	(multiple lines allowed)

6.4.x (add sections for each additional IF distribution)

#### 6.5 Up/down converters

X up/down converter freq.:	(MHz) (up/down)	
S up/down converter freq.:	(MHz) (up/down)	
Additional information	:	(multiple lines allowed)

6.5.x (add sections for each additional converter)

6.6 Other rack equipment : CresTech VIA interface box,  
S2 16 channel sampler  
Additional information : (multiple lines allowed)

6.6.x (add lines or sections for other types of rack equipment)

#### 6.7 Recorders

Recorder type	:	MarkIV, S2
Number of recorders	:	1 MarkIV, 1 S2
Tape type	:	thin, S2 type)
Additional information	:	(multiple lines allowed)

6.7.x (add sections for each recorder type)

6.8 Data Acquisition System Configuration Types Supported  
(list only those that are actually usable)

6.8.1 Configuration 1 : (list elements from section 6 that  
: make a usable configuration)  
: Example:  
: 6.8.1.1 MKIV IF distribution  
: 6.8.1.2 MKIV BBCs  
: 6.8.1.3 MKIV formatter  
: 6.8.1.4 MKIV decoder  
: 6.8.1.5 MKIV recorder

6.8.2 Configuration 2 : 6.8.2.1 IF distributor MKIV  
: 6.8.2.2 MKIV BBCs  
: 6.8.2.3 S2 16 Chan 1 bit sampler  
: 6.8.2.4 Crestech  
: 6.8.2.5 S2 Recorder

### 7 Meteorological instrumentation

#### 7.1 Humidity sensor

Manufacturer	:	Delta OHM
Model	:	HD 8508TC

Institut Géographique National Direction de la Production Service de Géodésie et de Nivellement	Hartebeesthoek Co-location Survey	RT/G 61 Page 53 / 146 Version : 1      Révision : 0 Date 27/06/2005
---	--------------------------------------	--

Accuracy : (% rel h)  
Effective dates : (yyyy-mm-dd to yyyy-mm-dd)  
Additional information : (multiple lines allowed)

#### 7.2 Pressure sensor

Manufacturer : Setra  
Model : Sirius III SP-208  
Accuracy : 0.1  
Effective dates : (yyyy-mm-dd to yyyy-mm-dd)  
Height relative to VLBI : (m)  
Additional information : (multiple lines allowed)

#### 7.3 Temperature sensor

Manufacturer : Delta OHM  
Model : HD 8508TC  
Accuracy : (degrees)  
Effective dates : (yyyy-mm-dd to yyyy-mm-dd)  
Additional information : (multiple lines allowed)

### 8. Time and frequency standards

#### 8.1

Standard type : H-maser  
Installed dates : 1985-MAY-13  
Manufacturer : Oscilloquartz  
Model number or ID : EFO 6  
Additional information : (multiple lines allowed)

#### 8.x (add more sections for each standard)

### 9. Auxilliary equipment information

Type of equipment : (WVR, etc.)  
Installed dates : (yyyy-mm-dd to yyyy-mm-dd)  
Manufacturer :  
Model number or ID :  
Additional information : (multiple lines allowed)

#### 9.x (add sections for additional auxilliary equipment)

### 10. Co-location information

#### 10.1

Instrument type : GPS  
Instrument name : Ashtec Z12  
Status : Permanent  
Effective dates : 1996-SEP-05  
Included in local survey: yes  
Additional information : (multiple lines allowed)

#### 10.x (add sections for each type)

### 11. Field System computer information

System vendor : PCI  
CPU : P  
CPU speed : 100 MHz  
Memory : 48 Mbytes  
Disk : 2x1 Gbytes  
Linux release : Debian 2.0  
Internet connection : direct  
Antenna interface type : ethernet  
Spare FS computer? : yes

### 12. Known RFI sources

#### 12.1

Center frequency : (MHz)  
Approximate bandwidth :  
Approximate az/el range : (give range affected by RFI)  
Additional informaiton : (multiple lines allowed, give estimate  
of strength of interference)

#### 12.x (add sections for multiple RFI sources and frequencies)

### 13. On-site contact information

PARAMETERS		OBSERVATIONS	
Description	Number	Description	Number
No. of Stations	61	Directions	116
Coord Parameters	147	Distances	76
Free Latitudes	43	Azimuths	1
Free Longitudes	43	Vertical Angles	0
Free Heights	61	Zenithal Angles	109
Fixed Coordinates	36	Angles	0
Astro. Latitudes	0	Heights	0
Astro. Longitudes	0	Height Differences	93
Geoid Records	0	Auxiliary Params.	0
All Aux. Pars.	38	2-DCoords.	0
Direction Pars.	38	2-D Coord. Diffs.	82
Scale Parameters	0	3-DCoords.	3
Constant Pars.	0	3-D Coord. Diffs.	0
Rotation Pars.	0		
Translation Pars.	0		
Total Parameters	185	Total Observations	480
Degrees of Freedom = 295			

SUMMARY OF SELECTED OPTIONS	
OPTION	SELECTION
Computation Mode	Adjustment
Maximum Iterations	30
Convergence Criterion	0.00010
Residual Rejection Criterion	Tau Max
Confidence Region Types	1D 2D 3D Station
Variance Factor (VF) Known	Yes
Scale Covariance Matrix With VF	Yes
Scale Residual Variances With VF	No
Force Convergence in Max Iters	No
Distances Contribute To Heights	Yes
Compute Full Inverse	Yes
Optimize Band Width	Yes
Generate Initial Coordinates	Yes
Re-Transform Obs After 1st Pass	Yes
Geoid Interpolation Method	Bi-Quadratic

```

STATISTICS SUMMARY

Residual Critical Value	Type	Tau Max
Residual Critical Value		4.0005
Number of Flagged Residuals		0
Convergence Criterion		0.0001
Final Iteration Counter Value		4
Confidence Level Used		95.0000
Estimated Variance Factor		1.0389
Number of Degrees of Freedom		295

Chi-Square Test on the Variance Factor:

8.8965e-01 < 1.0000 < 1.2292e+00 ?

THE TEST PASSES

NOTE: All confidence regions were computed using the following factors:

Variance factor used	=	1.0389
1-D expansion factor	=	1.9600
2-D expansion factor	=	2.4477
3-D expansion factor	=	2.7955

Note that, for relative confidence regions, precisions are computed from the ratio of the major semi-axis and the spatial distance between the two stations.

## 5.11. HartRAO covariance matrix of selected points

```

*
* Extracted coordinates follow: (extracted on Tue Jun 21 15:41:51 2005)
* Source (GeoLab adjustment): HRAO
* Variance factor of adjustment = 1.038852
* Variance factor used in computing covariance matrix = 1.038852
* Number of degrees of freedom of adjustment = 295
* Number of stations in adjusted network = 61
* Number of stations extracted = 11

PARAMETERS		OBSERVATIONS	
Description	Number	Description	Number
No. of Stations	34	Directions	53
Coord Parameters	86	Distances	30
Free Latitudes	26	Azimuths	1
Free Longitudes	26	Vertical Angles	0
Free Heights	34	Zenithal Angles	43
Fixed Coordinates	16	Angles	0
Astro. Latitudes	0	Heights	0
Astro. Longitudes	0	Height Differences	38
Geoid Records	0	Auxiliary Params.	0
All Aux. Pars.	14	2-DCoords.	0
Direction Pars.	14	2-D Coord. Diffs.	32
Scale Parameters	0	3-DCoords.	3
Constant Pars.	0	3-D Coord. Diffs.	0
Rotation Pars.	0		
Translation Pars.	0		
Total Parameters	100	Total Observations	200
Degrees of Freedom = 100			

SUMMARY OF SELECTED OPTIONS	
OPTION	SELECTION
Computation Mode	Adjustment
Maximum Iterations	30
Convergence Criterion	0.00010
Residual Rejection Criterion	Tau Max
Confidence Region Types	1D 2D 3D Station
Variance Factor (VF) Known	Yes
Scale Covariance Matrix With VF	Yes
Scale Residual Variances With VF	No
Force Convergence in Max Iters	No
Distances Contribute To Heights	Yes
Compute Full Inverse	Yes
Optimize Band Width	Yes
Generate Initial Coordinates	Yes
Re-Transform Obs After 1st Pass	Yes
Geoid Interpolation Method	Bi-Quadratic

## STATISTICS SUMMARY

Residual Critical Value	Type	Tau	Max
Residual Critical Value		3.7251	
Number of Flagged Residuals		0	
Convergence Criterion		0.0001	
Final Iteration Counter Value		2	
Confidence Level Used		95.0000	
Estimated Variance Factor		1.0311	
Number of Degrees of Freedom		100	

### Chi-Square Test on the Variance Factor:

7.9583e-01 < 1.0000 < 1.3892e+00 ?

## THE TEST PASSES

NOTE: All confidence regions were computed using the following factors:

Variance factor used	=	1.0311
1-D expansion factor	=	1.9600
2-D expansion factor	=	2.4477
3-D expansion factor	=	2.7955

Note that, for relative confidence regions, precisions are computed from the ratio of the major semi-axis and the spatial distance between the two stations.

### 5.13. SAC network covariance matrix of selected points

```

*
* Extracted coordinates follow: (extracted on Tue Jun 21 15:45:09 2005)
* Source (GeoLab adjustment): SAC
* Variance factor of adjustment = 1.031407
* Variance factor used in computing covariance matrix = 1.031407
* Number of degrees of freedom of adjustment = 100
* Number of stations in adjusted network = 34
* Number of stations extracted = 4

Residual Critical Value Type	Tau Max
Residual Critical Value	4.0983
Number of Flagged Residuals	0
Convergence Criterion	0.0001
Final Iteration Counter Value	4
Confidence Level Used	95.0000
Estimated Variance Factor	1.0940
Number of Degrees of Freedom	414

Chi-Square Test on the Variance Factor:

9.5901e-01 < 1.0000 < 1.2598e+00 ?

THE TEST PASSES

NOTE: All confidence regions were computed using the following factors:

Variance factor used	=	1.0940
1-D expansion factor	=	1.9600
2-D expansion factor	=	2.4477
3-D expansion factor	=	2.7955

Note that, for relative confidence regions, precisions are computed from the ratio of the major semi-axis and the spatial distance between the two stations.

2-D and 1-D Station Confidence Regions (95.000 and 95.000 percent):				
STATION	MAJOR SEMI-AXIS	AZ	MINOR SEMI-AXIS	VERTICAL
10	0.0000	0	0.0000	0.0020
100	0.0022	37	0.0017	0.0035
1001	0.0015	39	0.0010	0.0021
1002	0.0023	77	0.0013	0.0023
1003	0.0014	102	0.0011	0.0023

## 5.15. Global results covariance matrix of selected points

\*  
 \* Extracted coordinates follow: (extracted on Tue Jun 14 18:50:50 2005)  
 \* Source (GeoLab adjustment): GLOBAL  
 \* Variance factor of adjustment = 1.093986  
 \* Variance factor used in computing covariance matrix = 1.093986  
 \* Number of degrees of freedom of adjustment = 414  
 \* Number of stations in adjusted network = 95  
 \* Number of stations extracted = 5  
 \*
